Guide Name

**PROF.
Pranav Trivedi**

ACKNOWLEDGEMENTS

While the report for my project work is ready, I feel it is my bound duty to offer my sincere thanks to all those who have helped and guided me in this regard.

Action is very necessary to turn our dreams into reality. My dream was to develop this project. To create a successful and useful project, one needs help, understanding, and coordination from all those who are directly or indirectly involved in it.

Many people have contributed to making this project a reality. I would like to express my gratitude to our **Head of Department**, Prof. Brijesh Shah, for his guidance throughout the project.

When submitting the project report, it is my duty to offer my sincere thanks to those who have assisted me in preparing this project report. I would like to express my gratitude to Prof. Pranav Trivedi for his guidance throughout the project.

He helped me in selecting this topic and guided me to the final completion of my project by reviewing the manuscript of the chapters and providing valuable suggestions.

Before I describe my project in brief, I would like to add a few heartfelt words for those people who have given their time and knowledge to the development of this project.

Last but not least, I am thankful to all my college faculties and friends for their kind cooperation.

A Special thanks from:

Bhavik Sapariya

PREFACE

To prepare a project and a project report as separate subjects in the 6th semester of BCA, a project needs to be prepared on a particular subject after studying it thoroughly.

There is a significant difference between theoretical and practical knowledge, and understanding this difference is crucial for the application of knowledge.

Preparing a project report has been a new and interesting experience for me, although I find it challenging from certain aspects. It has allowed us to grasp theoretical concepts and their practical applications, contributing to greater confidence in our lives.

It was evident that it is essential and instructive not only to learn the principles of software engineering but also to apply them to a software development project.

This approach helps in comprehensively understanding all aspects of development within a project.

Through the preparation of this report, I have come to realize the importance of practical training in the field of education. Working with a computerized system is easier than a manual system; it saves time, effort, space, and increases efficiency by generating interest.

My project pertains to the "E-commerce website with admin Dashboard" The project report contains information about to Flow and Module of Project. This project is a part of my six semesters of the BCA course curriculum at Geetanjali College of Computer Science & Commerce in Rajkot.

I decided to create a web application for our college using MERN technology. Our college has a long-standing reputation as one of the best colleges in Saurashtra University.

E-Commerce Website

ABSTRACT

The e-commerce project aims to develop a comprehensive online platform that facilitates seamless buying and selling of products and services over the internet. With the increasing trend towards online shopping, the project seeks to capitalize on the growing digital marketplace by providing a user-friendly and secure e-commerce platform.

Key Features:

1. **User-friendly Interface:** The e-commerce platform will feature an intuitive and easy-to-navigate interface for both buyers and sellers, ensuring a seamless shopping experience.
2. **Product Catalog:** A diverse range of products and services will be showcased on the platform, organized into categories and subcategories for easy browsing.
3. **Secure Payment Gateway:** Integration with secure payment gateways will enable smooth and secure transactions, supporting various payment methods to accommodate customer preferences.
4. **Order Management:** Comprehensive order management functionalities will be implemented to track orders, manage inventory, and facilitate order fulfillment efficiently.
5. **Personalized Recommendations:** Utilizing advanced algorithms, the platform will offer personalized product recommendations based on user preferences and browsing history.
6. **Seller Dashboard:** Sellers will have access to a dedicated dashboard to manage their products, track sales, and monitor performance metrics.
7. **Customer Support:** Robust customer support mechanisms, including live chat, email support, and FAQs, will be provided to address customer queries and concerns promptly.
8. **Mobile Responsiveness:** The platform will be optimized for mobile devices, ensuring a seamless shopping experience across desktops, tablets, and smartphones.
9. **Marketing and Promotions:** Various marketing tools and promotional features will be incorporated to attract customers, drive sales, and enhance brand visibility.
10. **Analytics and Insights:** Comprehensive analytics and reporting capabilities will provide valuable insights into customer behavior, sales trends, and performance metrics to inform strategic decision-making.

E-Commerce Website

PROJECT SUMMERY

- I have created this project.
- My project definition is E- Commerce Website
- My project Guide is Prof Pranav Trivedi.

➤ Features: -

- Add your Product Category wise and you can also update it and remove it.
- User can Filter Product according their need like price wise category wise etc, Also show latest product listing
- User can see their order History

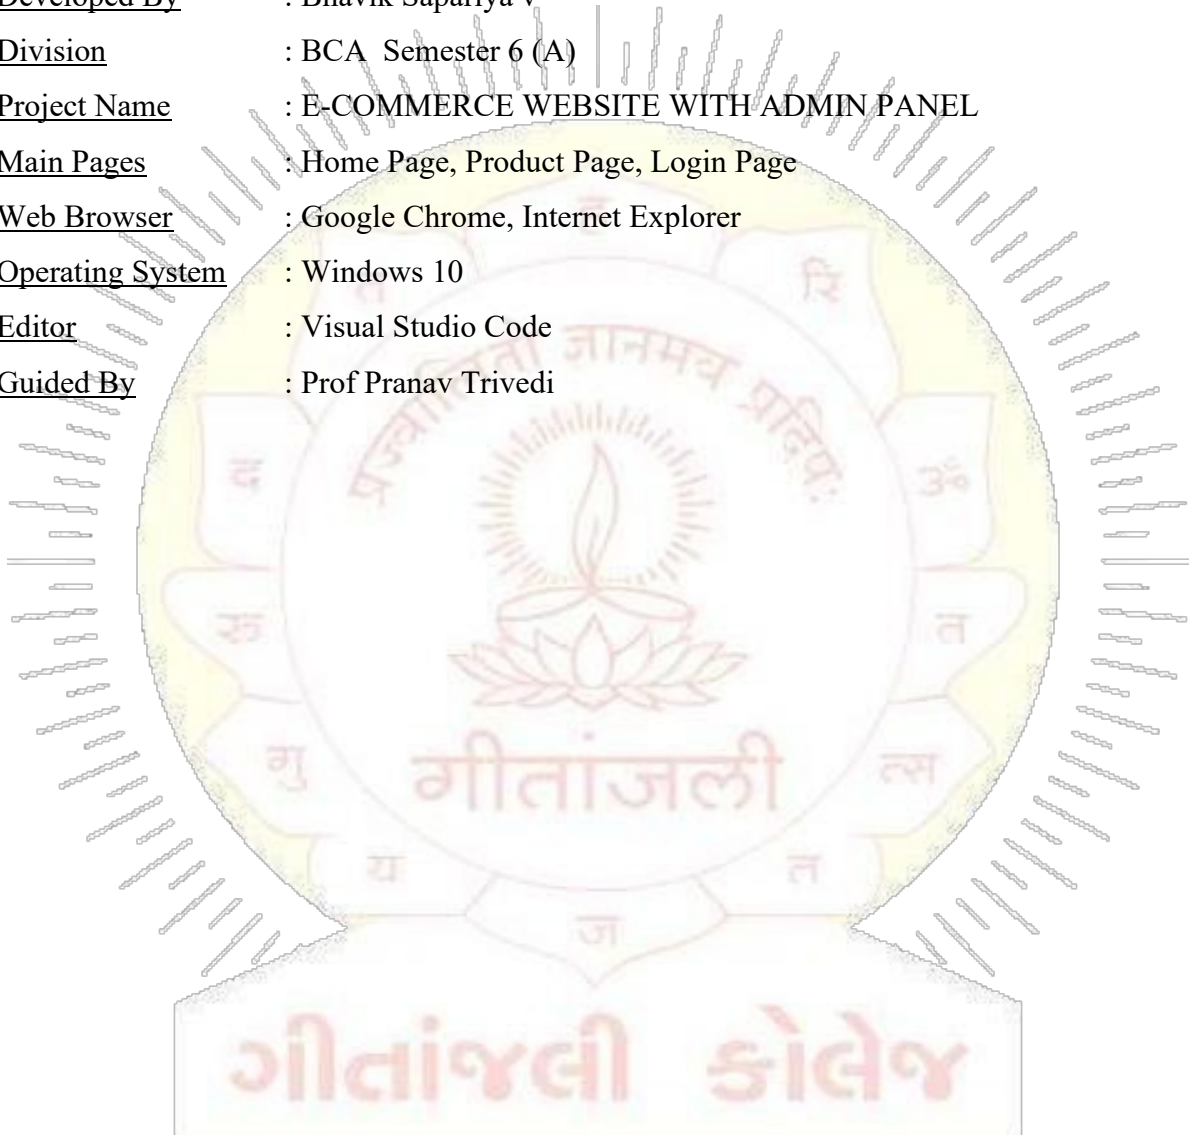

➤ This Project Goal: -

- Increase Sales: One of the primary goals of e-commerce projects is to drive more sales and revenue for the business. This could involve attracting new customers, increasing average order value, or improving conversion rates.
-

E-Commerce Website

PROJECT PROFILE

Developed At : Geetanjali College Computer Science & Commerce.
Developed By : Bhavik Sapariya v
Division : BCA Semester 6 (A)
Project Name : E-COMMERCE WEBSITE WITH ADMIN PANEL
Main Pages : Home Page, Product Page, Login Page
Web Browser : Google Chrome, Internet Explorer
Operating System : Windows 10
Editor : Visual Studio Code
Guided By : Prof Pranav Trivedi

E-Commerce Website

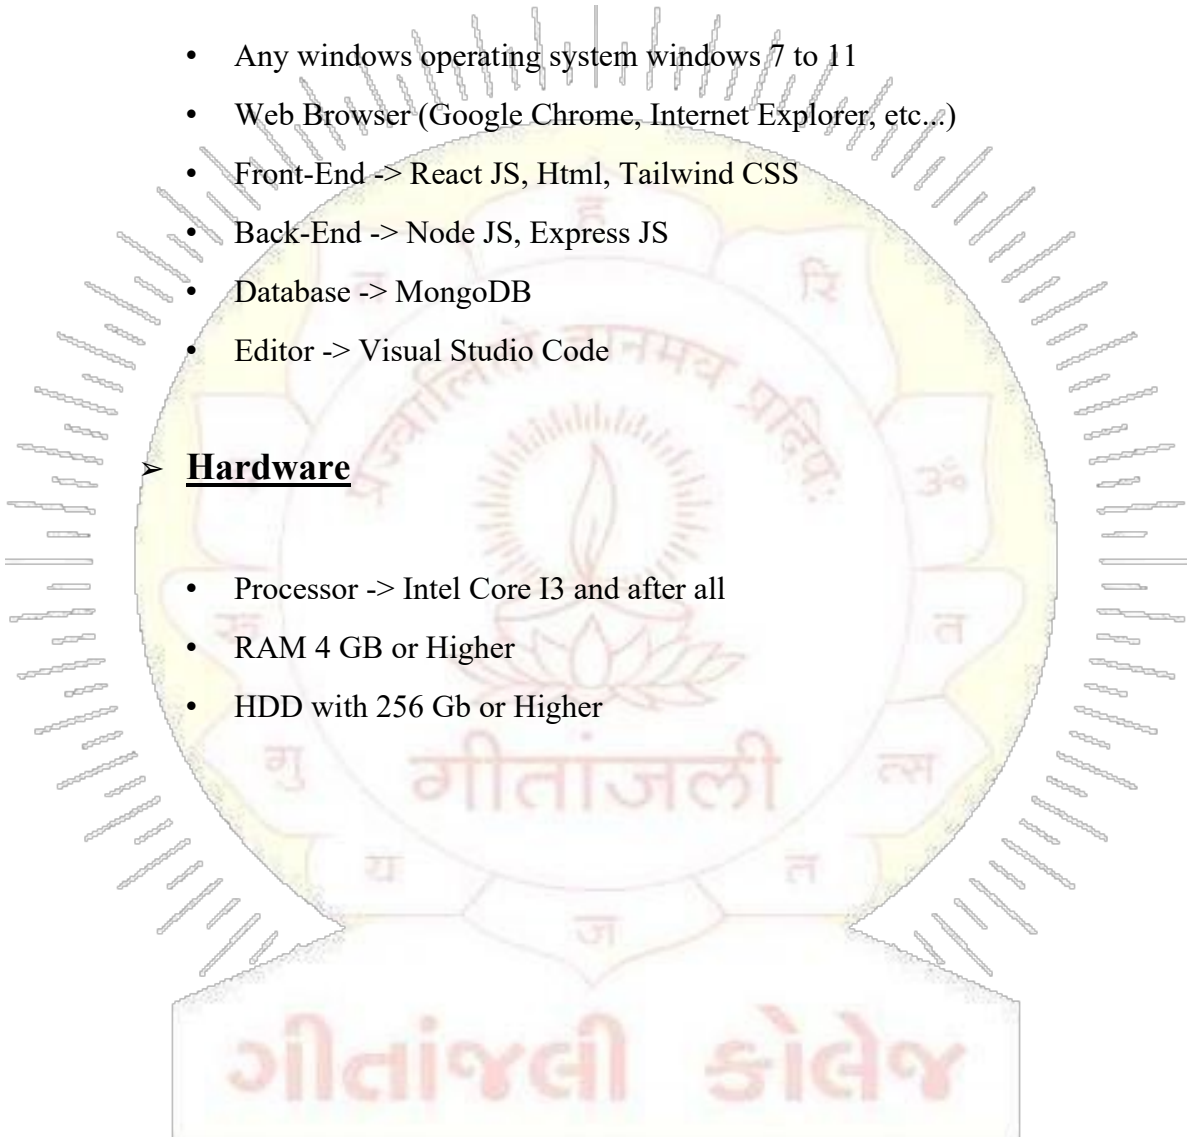

SYSTEM REQUIREMENTS

➤ Software

- Any windows operating system windows 7 to 11
- Web Browser (Google Chrome, Internet Explorer, etc...)
- Front-End -> React JS, Html, Tailwind CSS
- Back-End -> Node JS, Express JS
- Database -> MongoDB
- Editor -> Visual Studio Code

➤ Hardware

- Processor -> Intel Core I3 and after all
- RAM 4 GB or Higher
- HDD with 256 Gb or Higher

E-Commerce Website

PLATFORM SPECIFICATION

- Platform is providing the base of develop project in Expense Tracker & Income Management System I used to below platform.
- HTML, Tailwind CSS, React JS, Node JS, Express JS, MongoDB.

> HTML: -

- Hyper Text Mark-up Language (HTML) is a standard language. For creating web pages.
- It provides number of commands that can be used to place and format text, picture and sound on web pages.
- The linked to another document on the internet.
- Hyper Text Mark-up Language (HTML) is the computer coding language used to convert ordinary text into active text for display and used on the web and also to give plain, unstructured text the sort of structure human beings relays on to read it

> Tailwind CSS: -

- Tailwind CSS is a popular utility-first CSS framework that simplifies the process of building modern and responsive user interfaces.
- It differs from traditional CSS frameworks by providing low-level utility classes

E-Commerce Website

that can be composed to create designs, rather than pre-defined components.

- Tailwind CSS is known for its flexibility and the ability to customize styles without leaving the HTML file.

➤ **ReactJS: -**

- ReactJS, commonly referred to as React, is an open-source JavaScript library developed and maintained by Facebook.
- It is primarily used for building user interfaces (UI) for single-page applications where the UI needs to be dynamic and responsive to user interactions.
- React was first released in 2013 and has since gained widespread adoption in the web development community.

➤ **NodeJS: -**

- Node.js is an open-source, cross-platform JavaScript runtime environment that executes JavaScript code outside a web browser.
- It is built on the V8 JavaScript runtime engine, which is developed by Google for the Chrome browser.
- Node.js allows developers to use JavaScript to write server-side code, enabling them to create scalable and high-performance applications.

E-Commerce Website

➤ ExpressJS: -

- Express.js, commonly referred to as Express, is a minimal and flexible web application framework for Node.js.
- It provides a set of features and tools for building web and mobile applications, primarily focusing on creating robust and scalable server-side applications.
- Express is widely used in the development of web applications and APIs due to its simplicity, speed, and versatility.

➤ MongoDB: -

- MongoDB is a popular open-source NoSQL database management system that belongs to the document-oriented database category.
- Developed by MongoDB Inc.,
- It is design to store, retrieve, and manage data in a flexible, scalable, and high-performance manner.
- MongoDB is widely used in modern web development and is known for its ease of use, flexibility, and ability to handle large amounts of unstructured or semi-structured data.

E-Commerce Website

SOFTWARE DEVELOPMENT LIFE CYCLE(SDLC)

Software Development Life Cycle Steps:

Here, this web application project was developed based on SDLC (Software Development Life Cycle).

SDLC has a different step of development of website or any type of application.

The project develops in the MERN technology.

Following the SDLC steps are used in the application Development: -

- System Requirement Analysis
- Feasibility Study
- System Design
- Testing
- Implementation
- Maintenance

System Requirement Analysis:

- In this phase, the development team visits the need for possible software requirements in micro-depth to develop the system.
- The basic clearance of the application they informed by the system requirement
- analysis investigation team. Understanding fully what a project will deliver is critical to its success.

Feasibility Study:

- Feasibility means the analysis team's report first study and that after the decision to

E-Commerce Website

create this application.

- This team internally shows the company's possibility of developing this type of application.
- Tools and Technology, Economically, Government Rules & Regulations are considered.

System Design:

- This phase works on the creations of the first pre-model of the whole system.
- In terms of the end user/server technology, the number of tiers needed for the package architecture, the database design, the data structure design, etc., are all defined in this phase.

Implementation:

- Implementation was the phase where the actual coding and development took place.
- Programmers and developers write the software code based on the design specifications.
- This phase included rigorous testing to identify and fix any coding errors or bugs.

Testing:

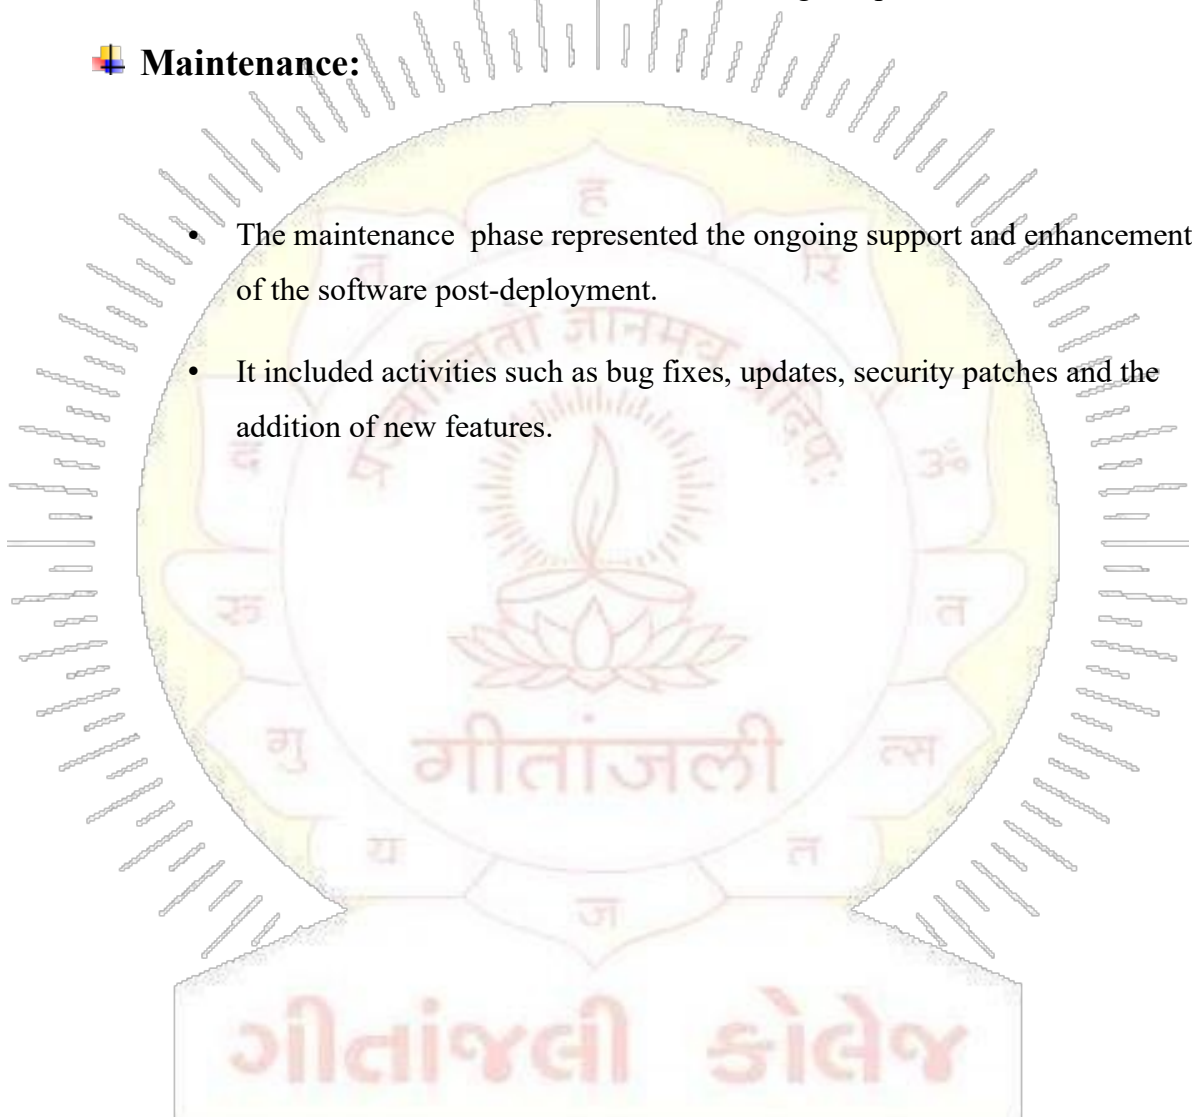

- The testing phase involved systematically evaluating the software to ensure it met quality standards.

E-Commerce Website

- Different testing levels, such as unit testing, integration testing, and user acceptance testing, were conducted to validate the software's functionality, performance, and reliability.
- Defects were identified and addressed during this phase.

Maintenance:

- The maintenance phase represented the ongoing support and enhancement of the software post-deployment.
- It included activities such as bug fixes, updates, security patches and the addition of new features.

LAYOUT DESIGN

USER

Page Name: - Home Page

Description: - This is the home page of E-commerce website it page has menu like Cart etc. In this page you can show image slider of money.

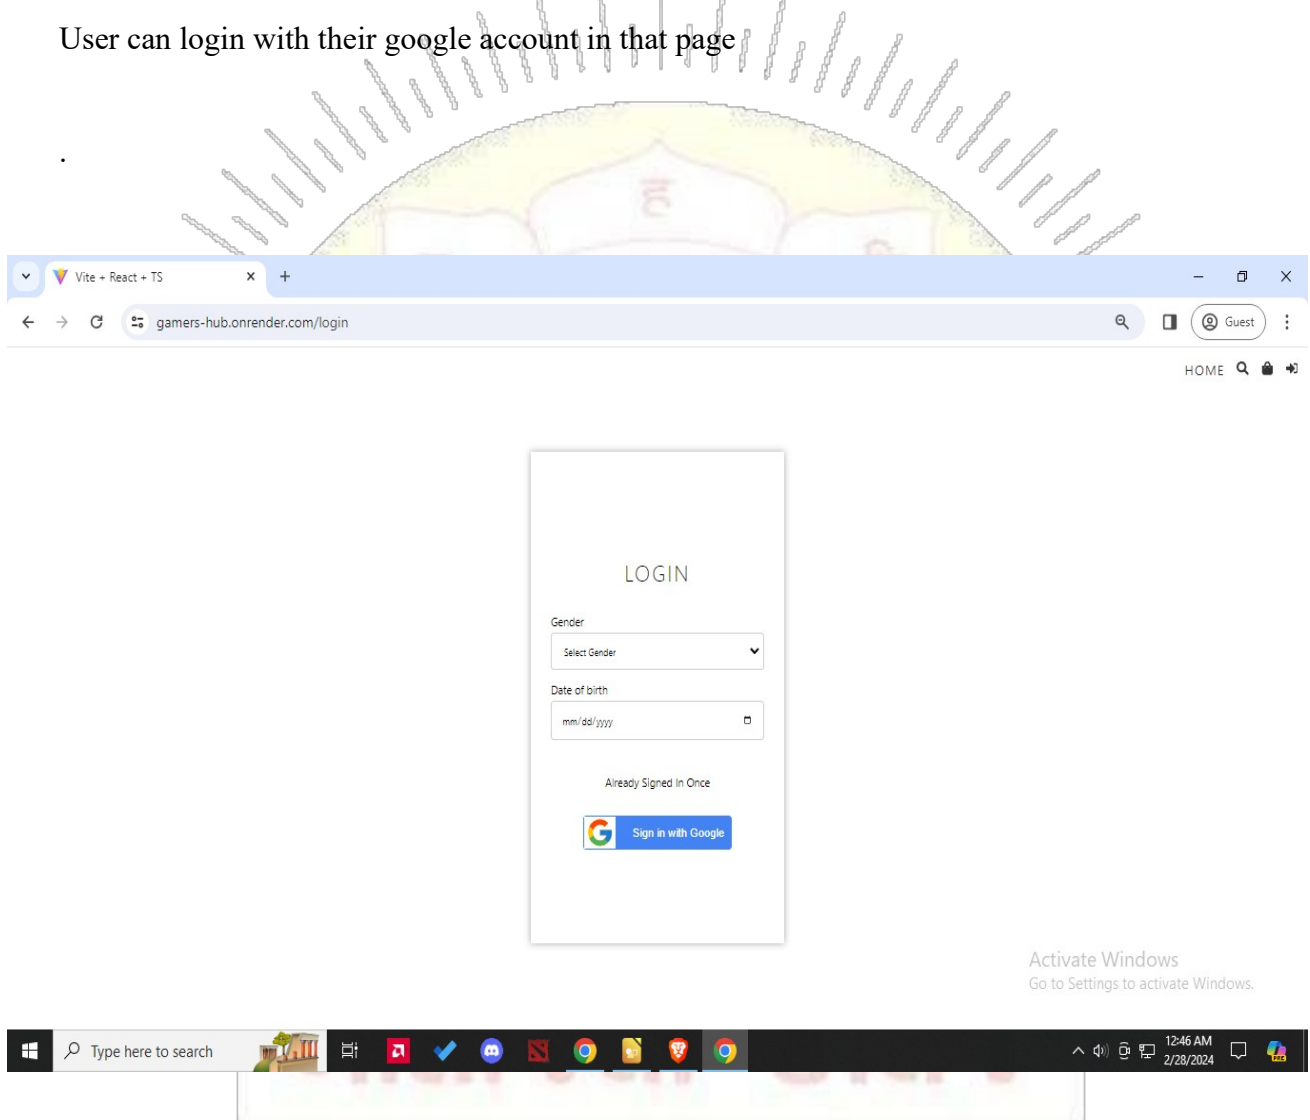

E-Commerce Website

Page Name: - Login Page

Description: - This is a login page of my E-commerce website you can see in this image

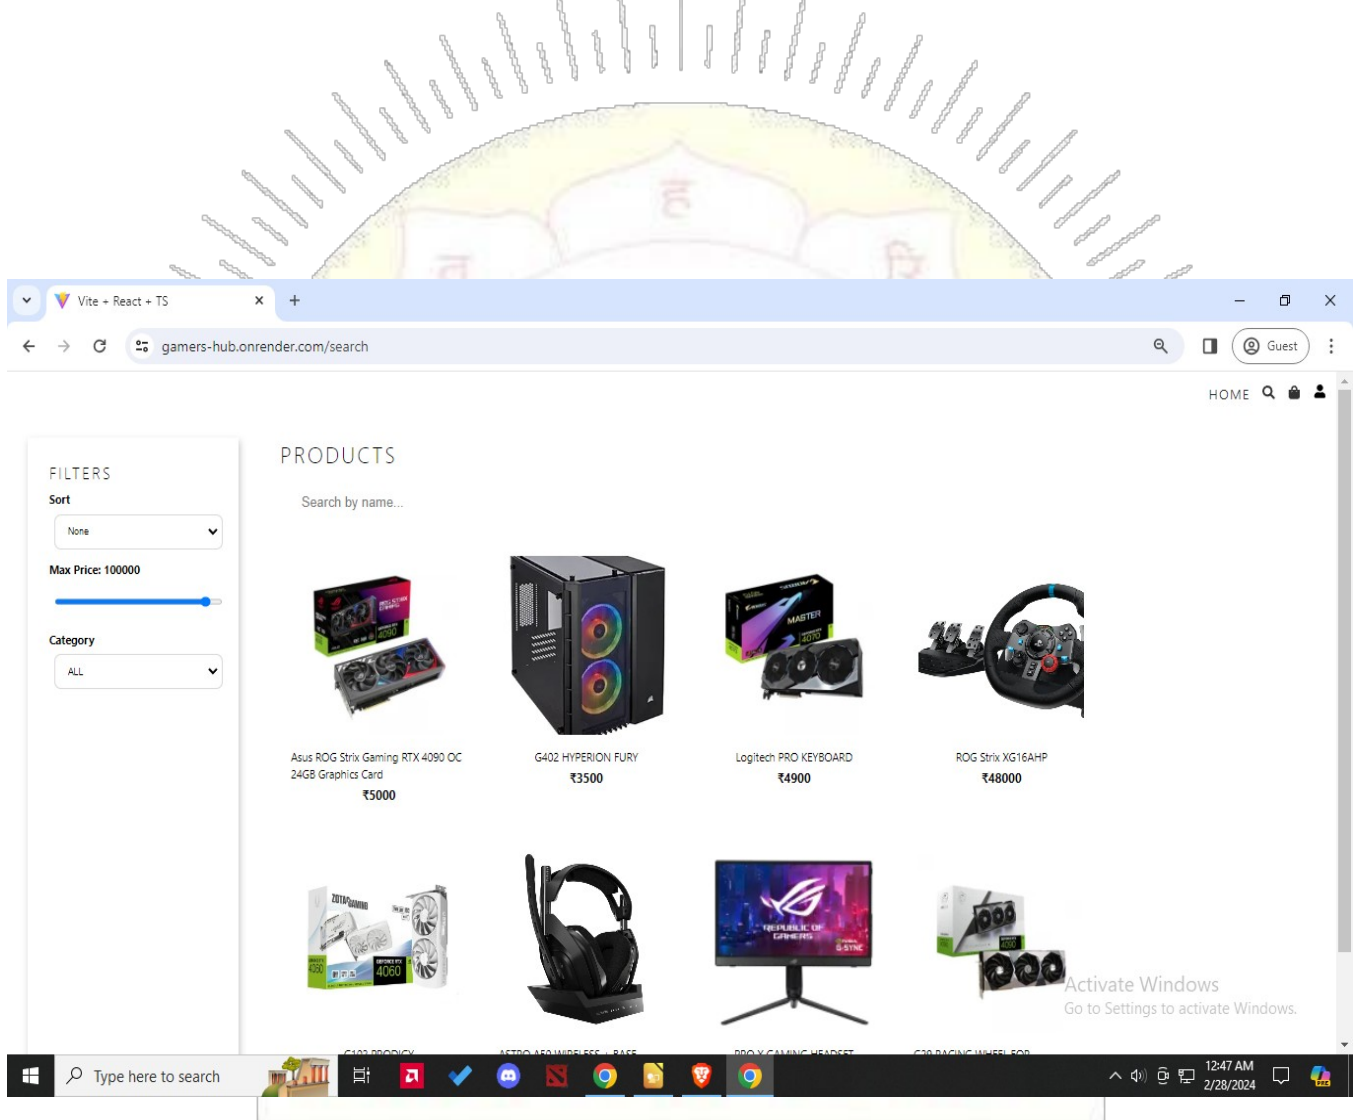

User can login with their google account in that page

E-Commerce Website

Page Name: - Product

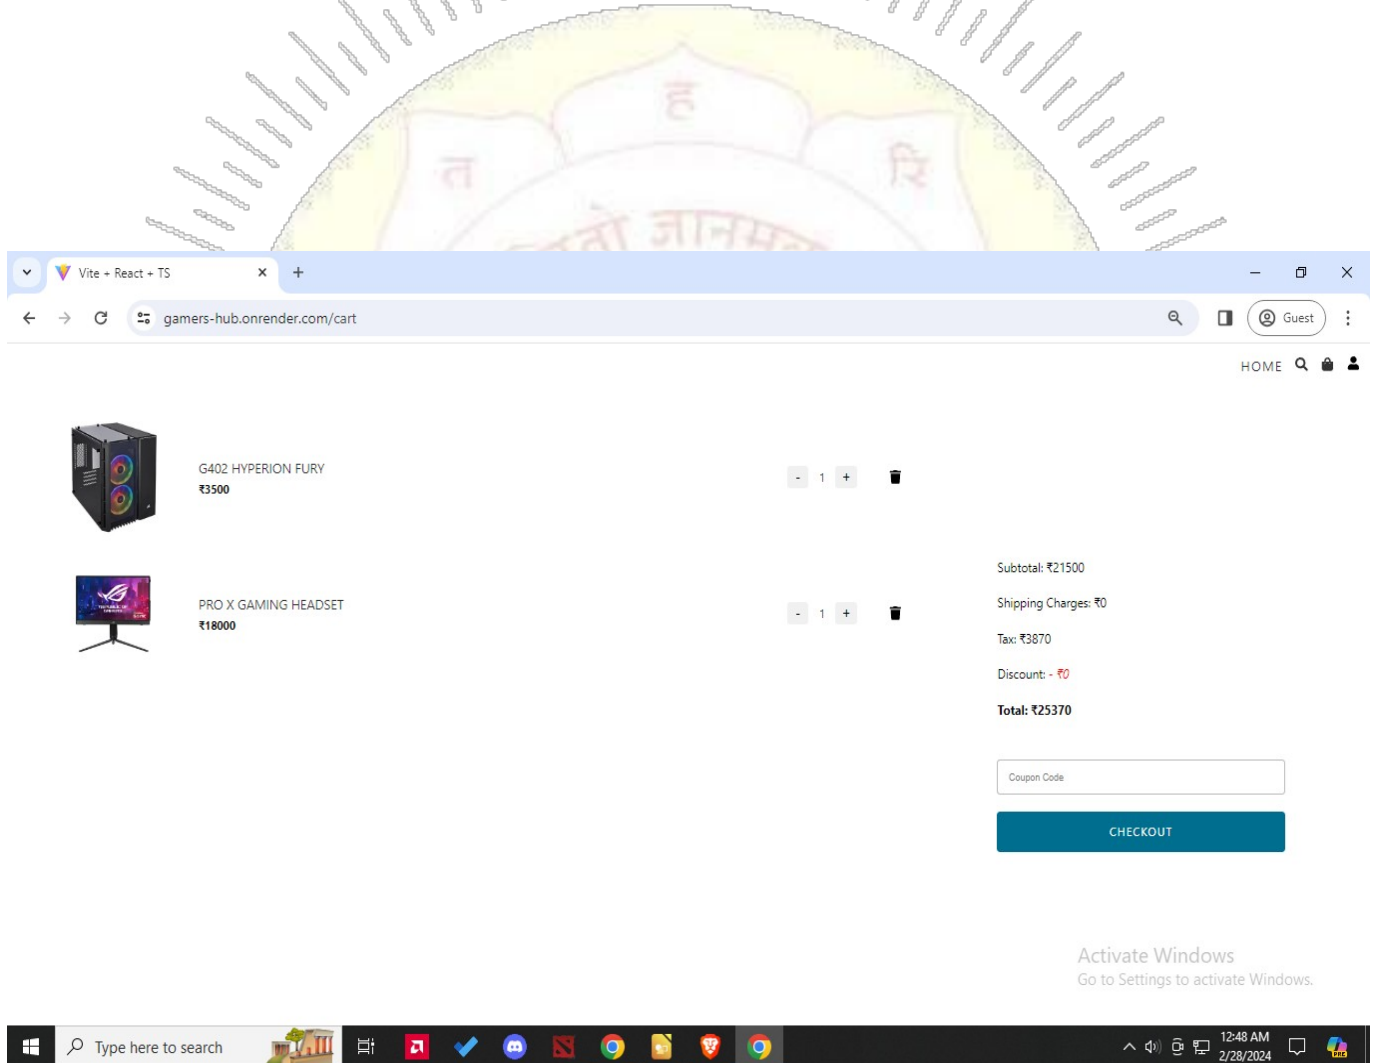

Description: - After login user can see Product list. Also he can filter product according To their need like sort low to high (or) high to low. Category wise and price wise

E-Commerce Website

Page Name: - Cart page

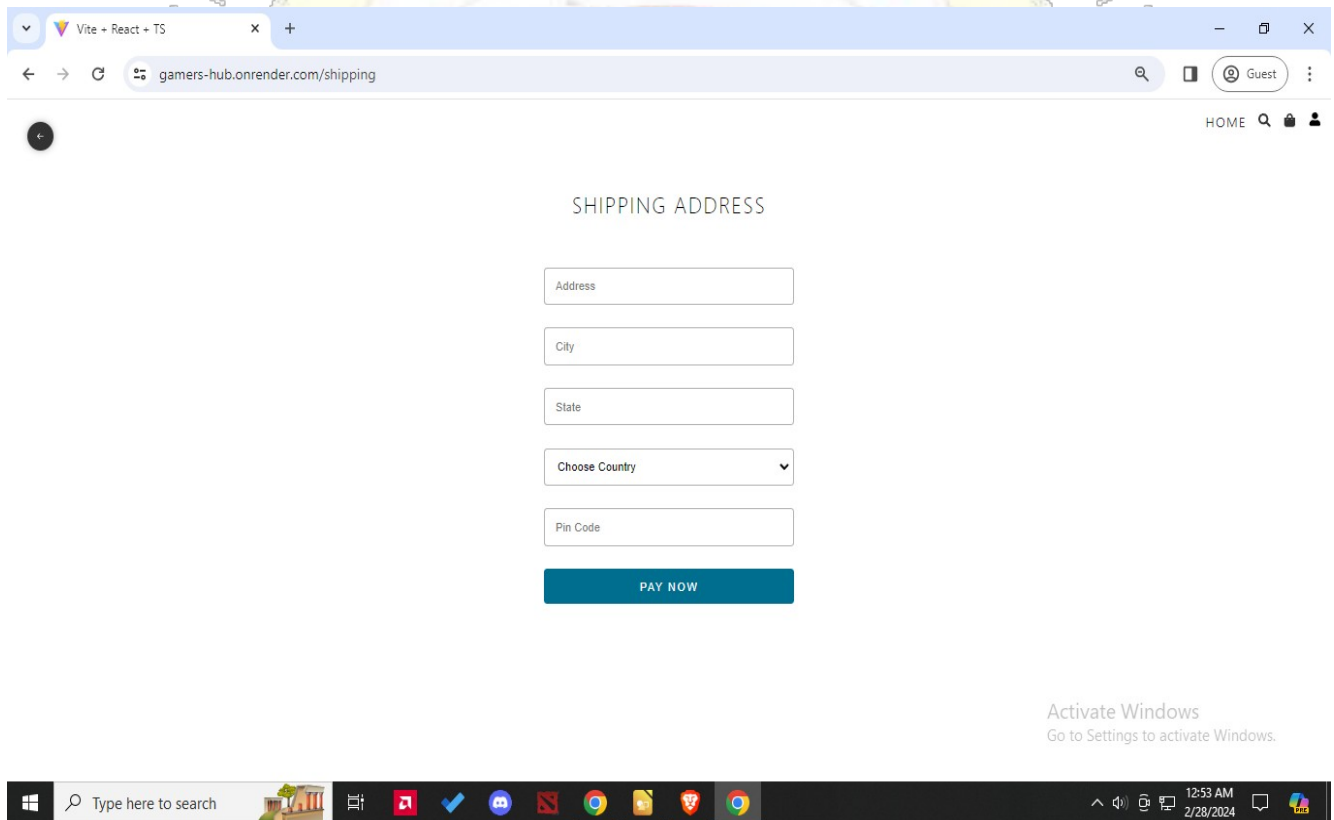

Description: - The Cart Page serves as a virtual shopping cart where users can view and manage the items they have added for purchase. It provides users with an overview of their selected products, allows them to modify quantities, remove items, and proceed to checkout.

E-Commerce Website

Page Name: - Shipping address

Description: - The Shipping Address Page serves as a crucial step in the checkout process, where users provide the necessary information for the delivery of their purchased items. It allows users to input or select their shipping address details, ensuring accurate and timely delivery of their orders.

E-Commerce Website

Page Name: - Payment Page

Description: - The Payment Page is a crucial component of the checkout process where users finalize their purchase by providing payment information. It enables secure and convenient transactions, allowing users to complete their orders with confidence.

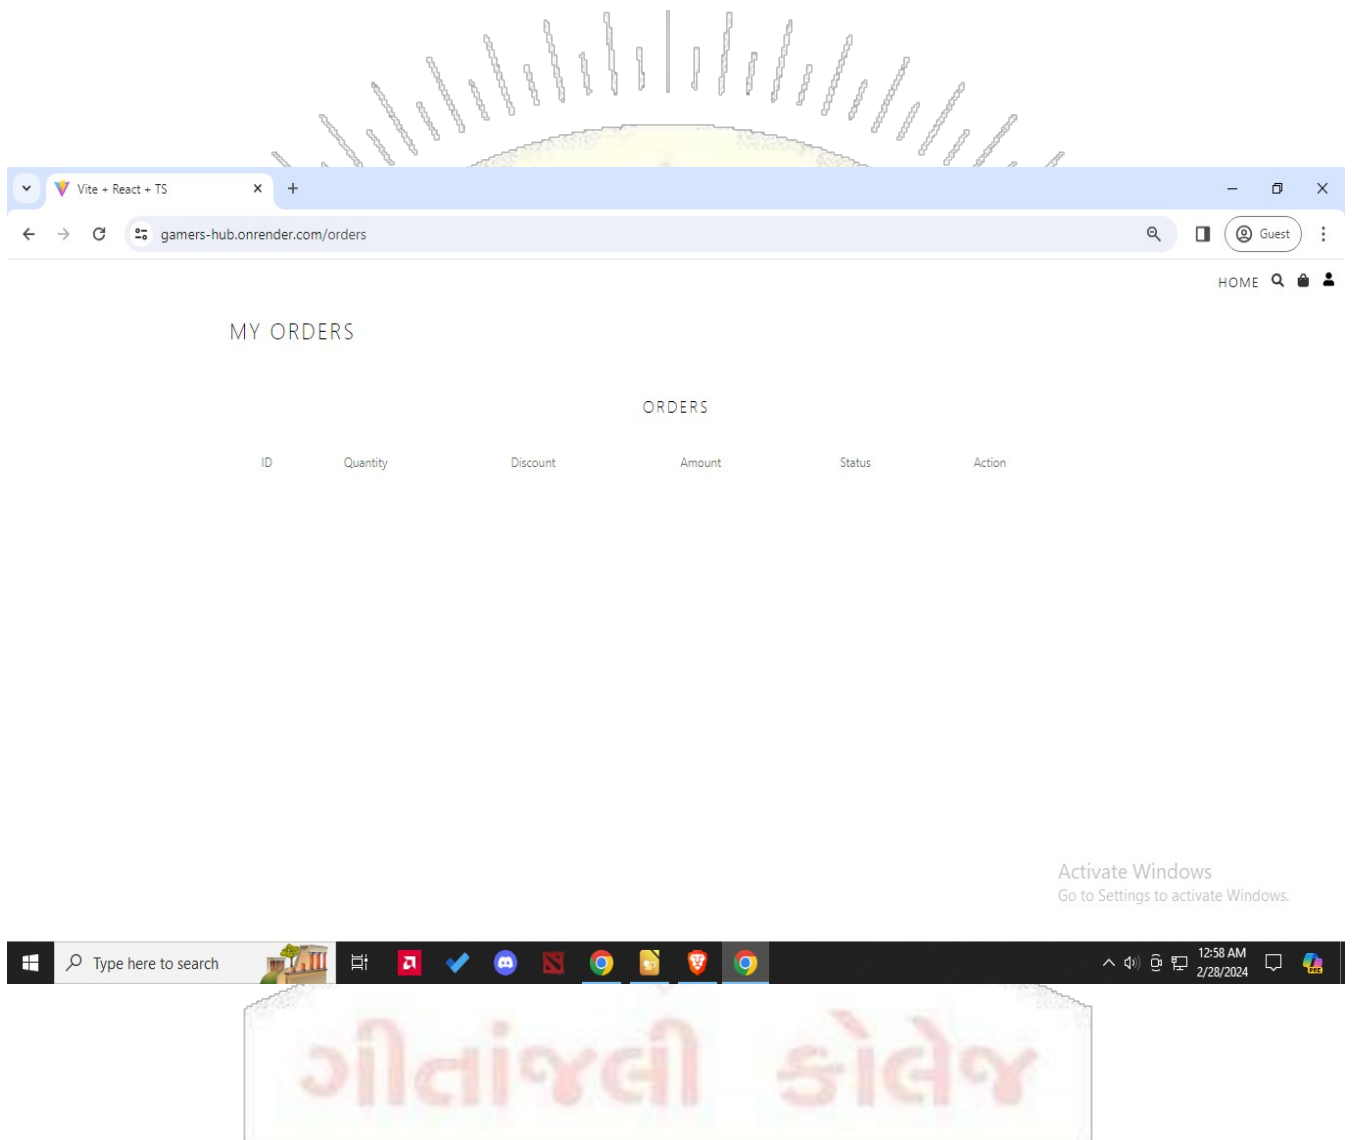

The screenshot displays a web browser window with the address bar showing 'gamers-hub.onrender.com/pay'. The page content features a payment form with the following elements:

- Card number:** A text input field containing '1234 1234 1234 1234' with a Visa logo to its right.
- Expiration:** A text input field with the placeholder 'MM / YY'.
- CVC:** A text input field with the placeholder 'CVC' and a card icon to its right.
- Country:** A dropdown menu currently showing 'India'.
- Pay Button:** A blue rectangular button with the text 'Pay' centered on it.

Below the browser window, the Windows taskbar is visible, showing the search bar with the text 'Type here to search', several application icons, and the system clock indicating '12:56 AM 2/28/2024'. An 'Activate Windows' watermark is also present in the bottom right corner of the desktop area.

E-Commerce Website

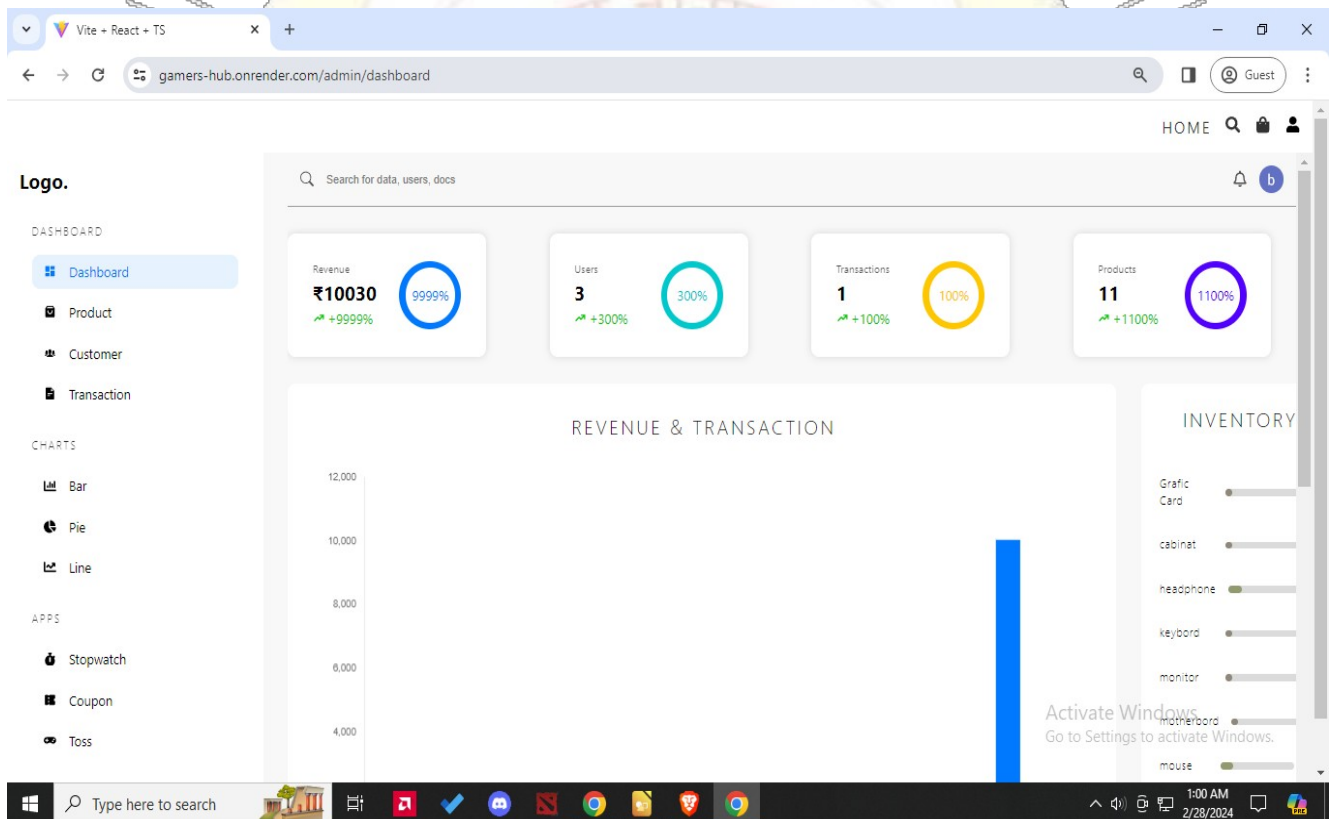

Description: - The Orders Page provides users with a comprehensive view of their order history and status. It serves as a central hub where users can track their past orders, view order details, and monitor the progress of ongoing orders.

E-Commerce Website

Page Name: - Admin Panel Home Page

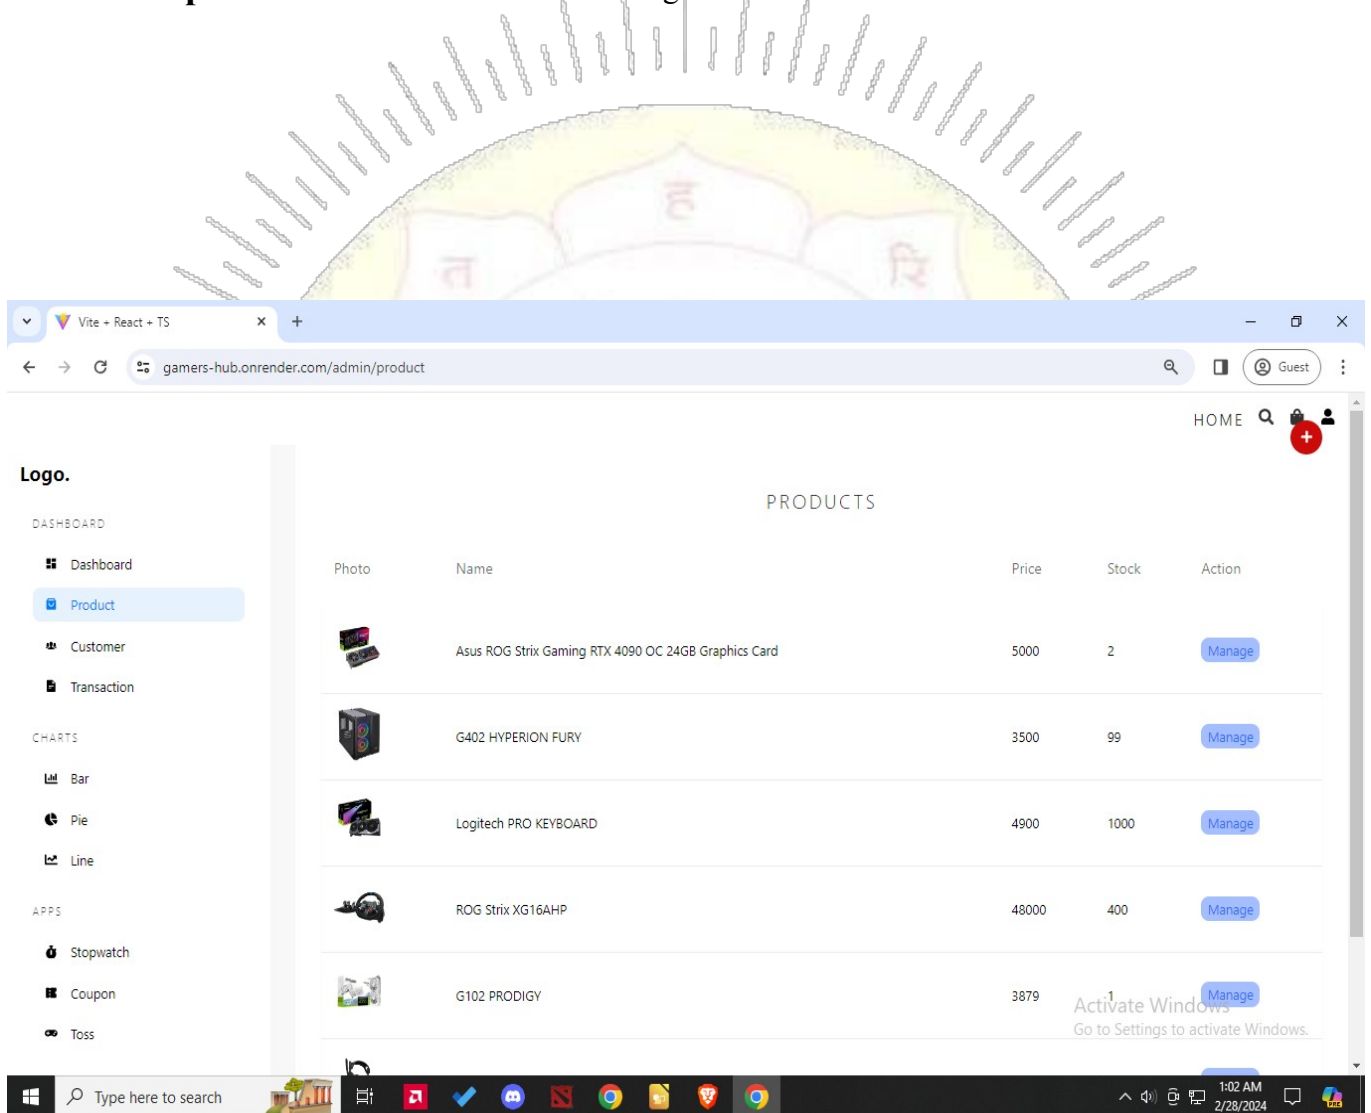

Description: - The Admin Panel Home Page serves as the central dashboard for administrators to manage and monitor various aspects of the e-commerce website. It provides an overview of key metrics, recent activities, and access to essential tools and functionalities required for administrative tasks.

E-Commerce Website

Page Name: - Admin Product List Page

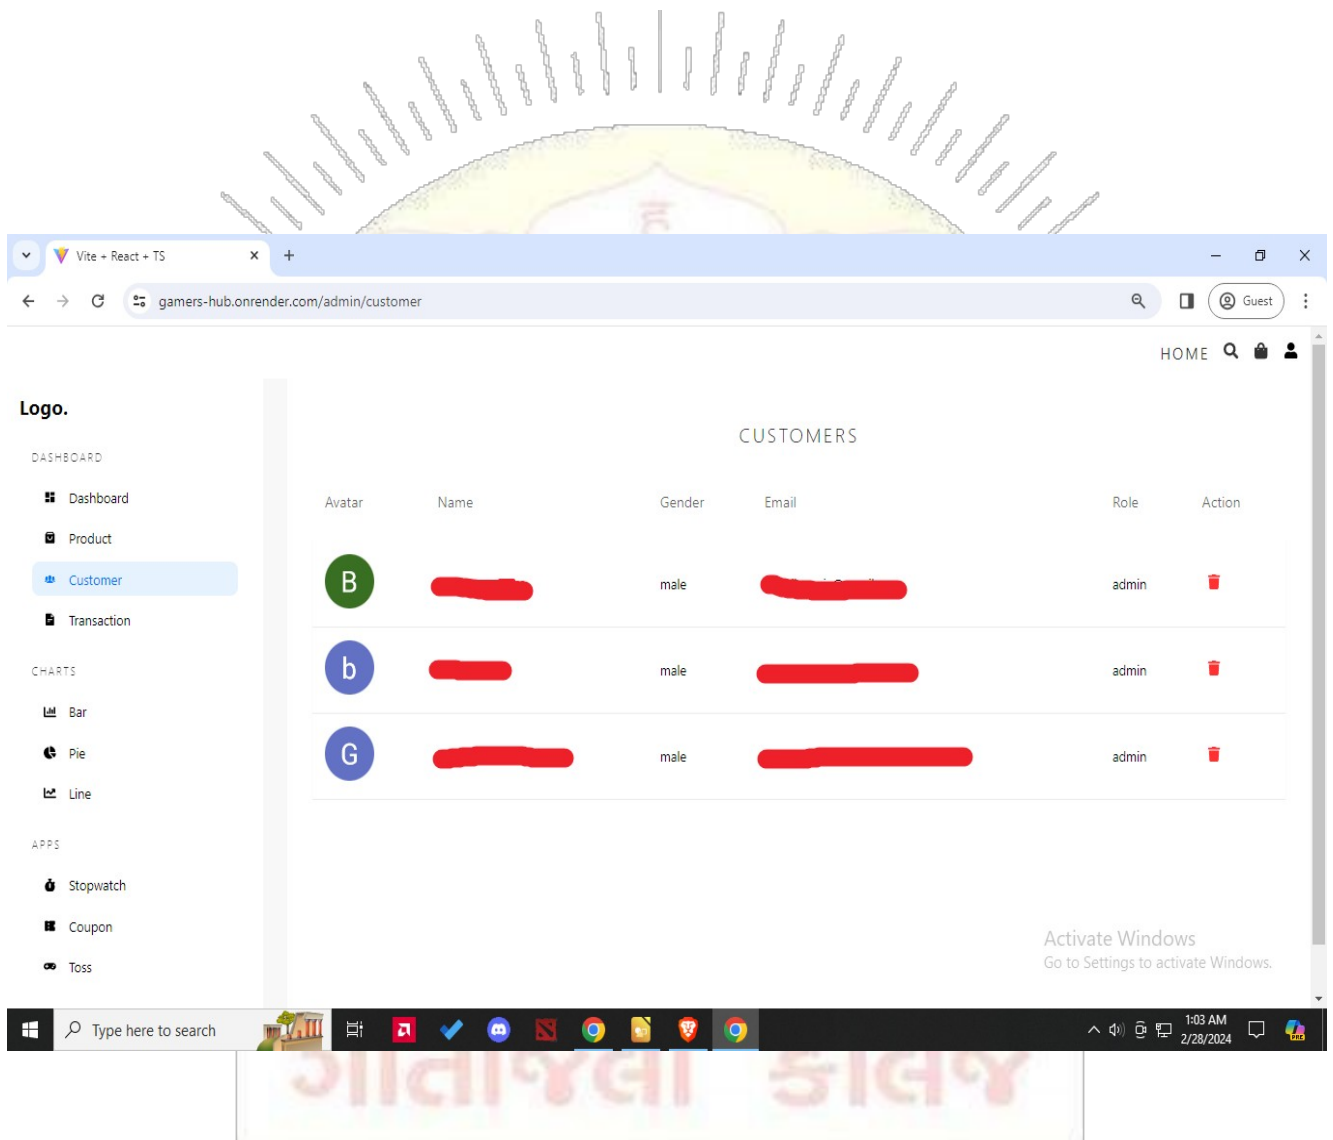

Description: - The Admin Product List Page serves as a centralized dashboard for administrators to manage

E-Commerce Website

Page Name: - Admin Customer Page

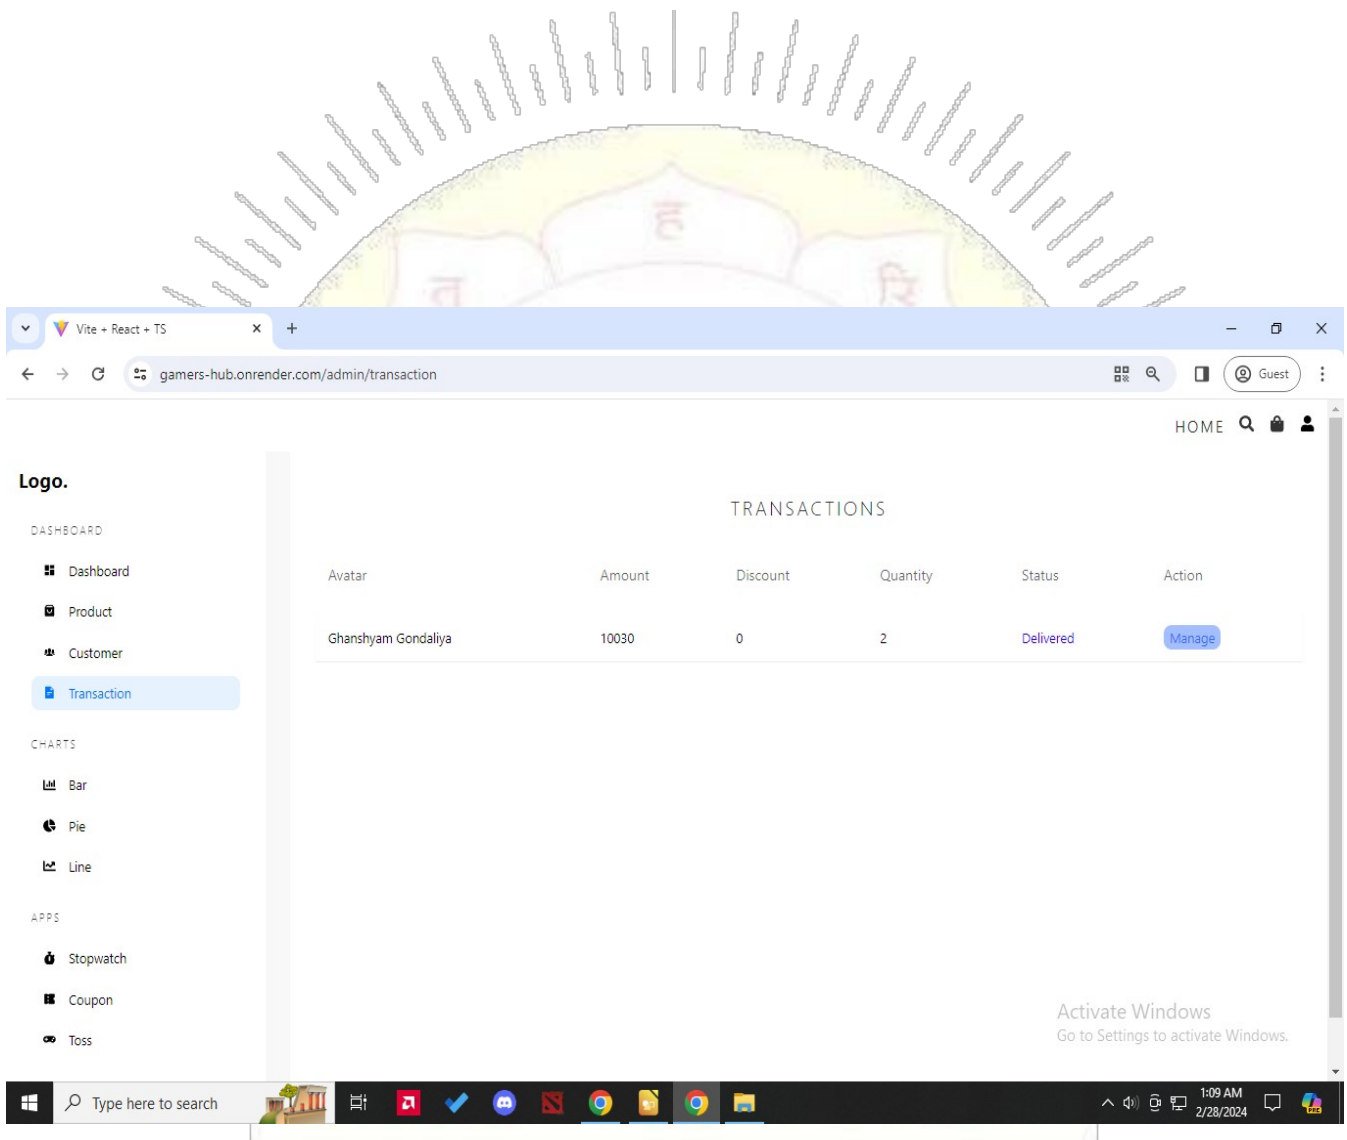

Description: - The Customer List Page provides administrators with a centralized view of all registered customers.

E-Commerce Website

Page Name: - Admin Transaction Page

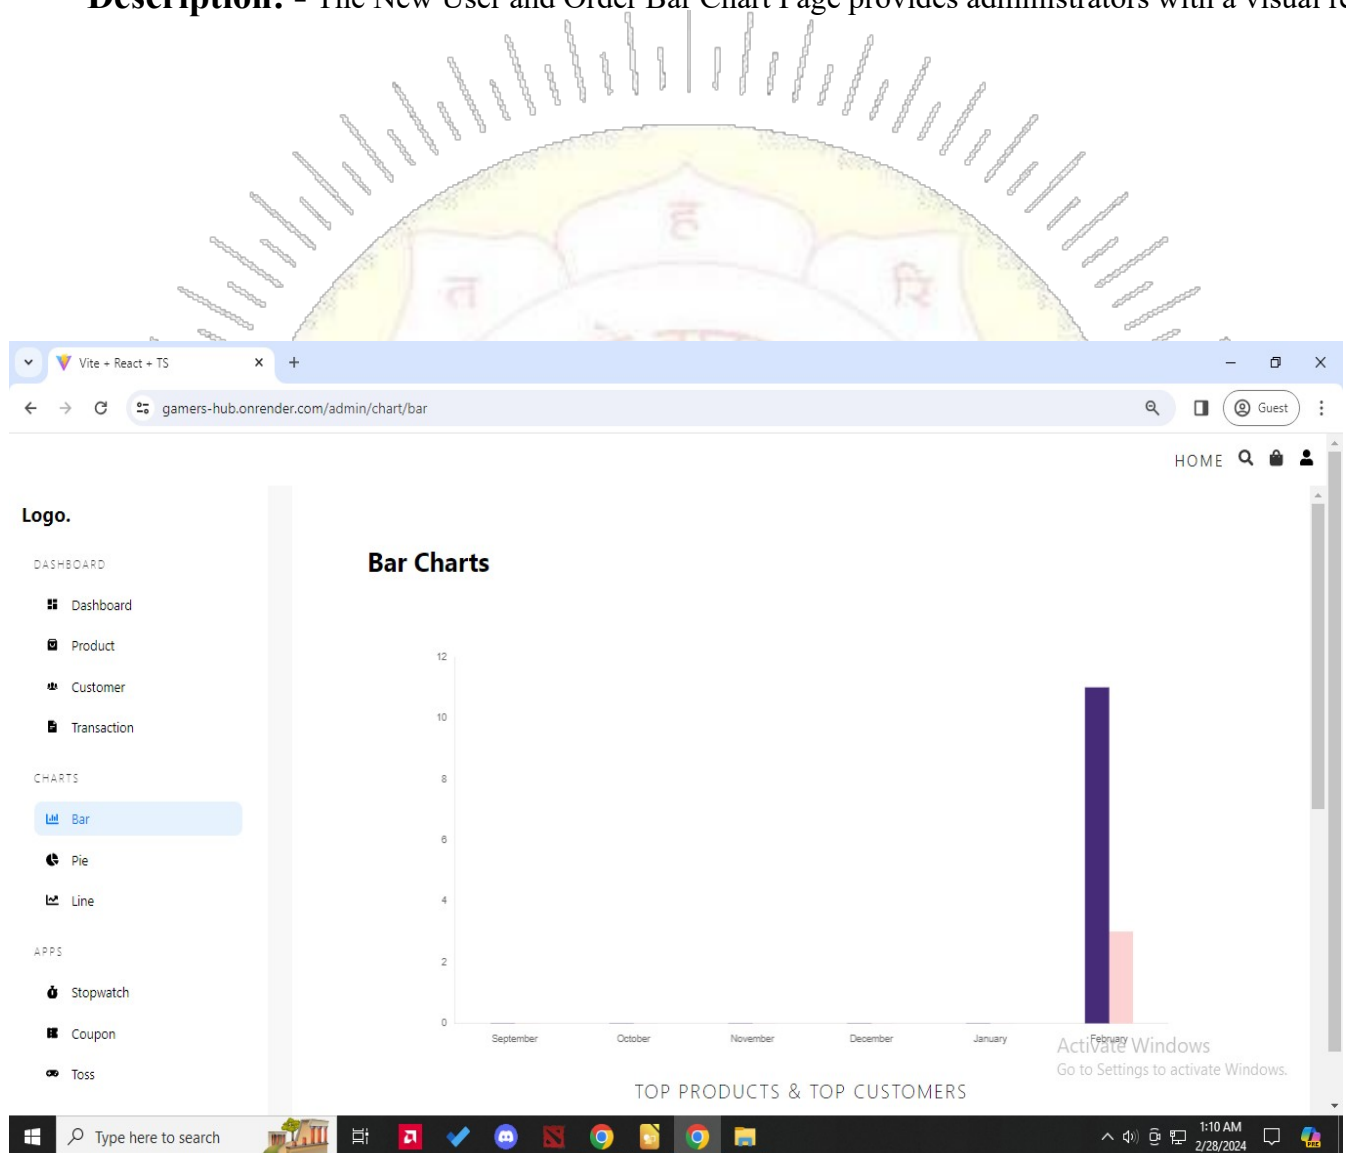

Description: - The Transaction Page on the admin side provides administrators with an overview of all transactions.

E-Commerce Website

Page Name: - Admin Bar chart user and order

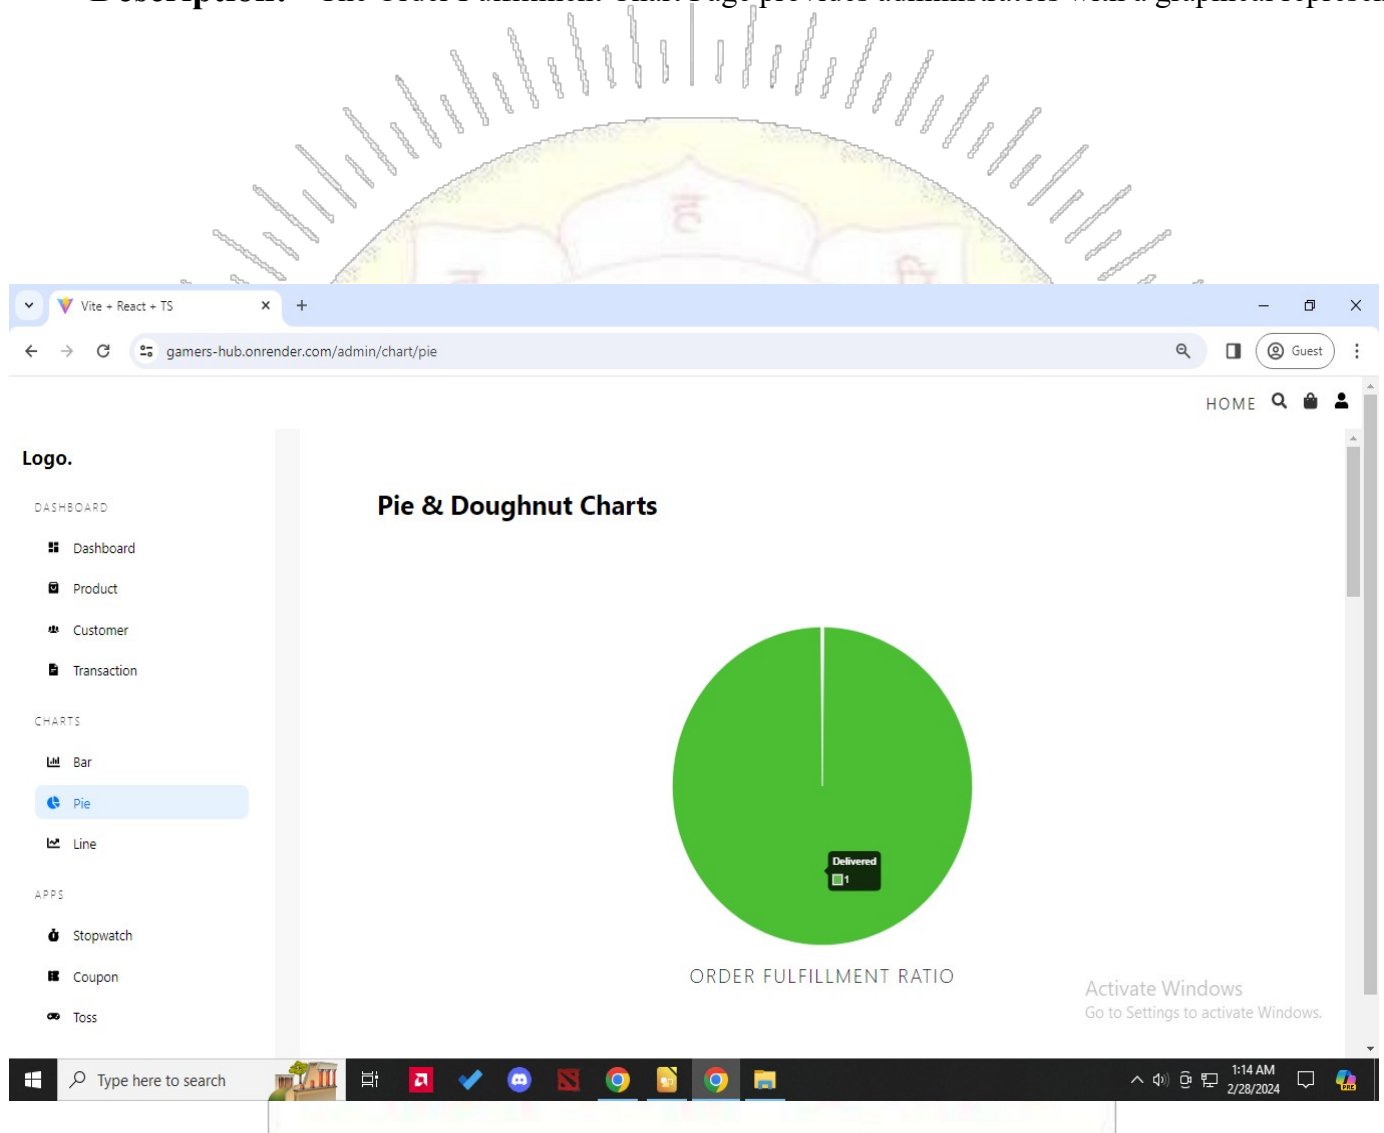

Description: - The New User and Order Bar Chart Page provides administrators with a visual representation

E-Commerce Website

Page Name: - Admin Orders Pie chart

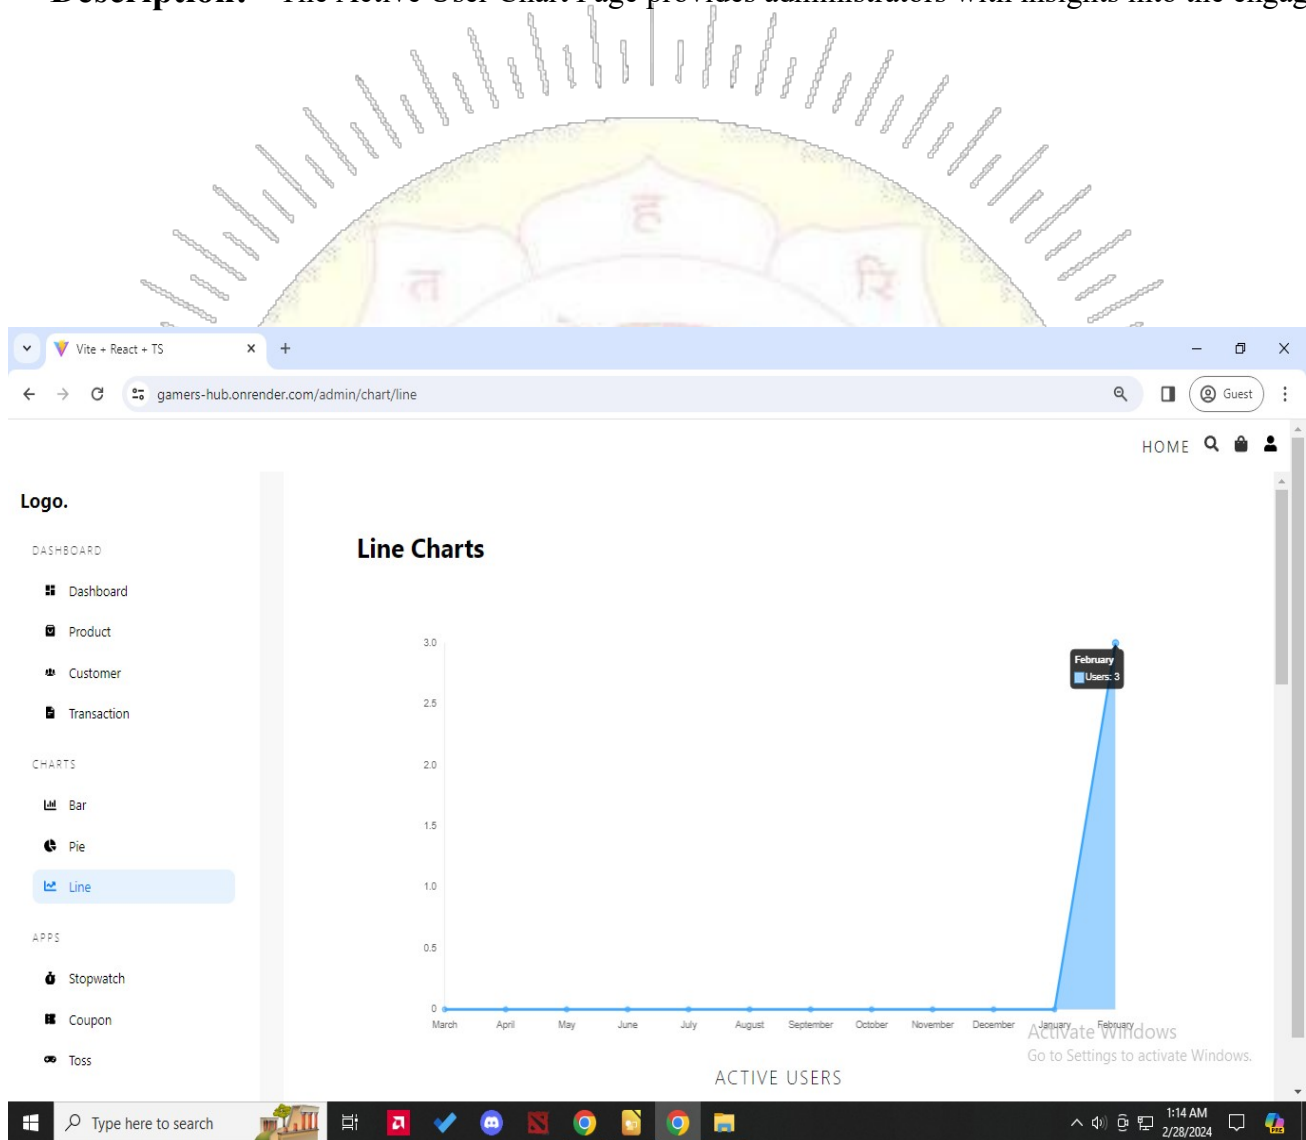

Description: - The Order Fulfillment Chart Page provides administrators with a graphical representation of

E-Commerce Website

Page Name: - Admin Active user chart

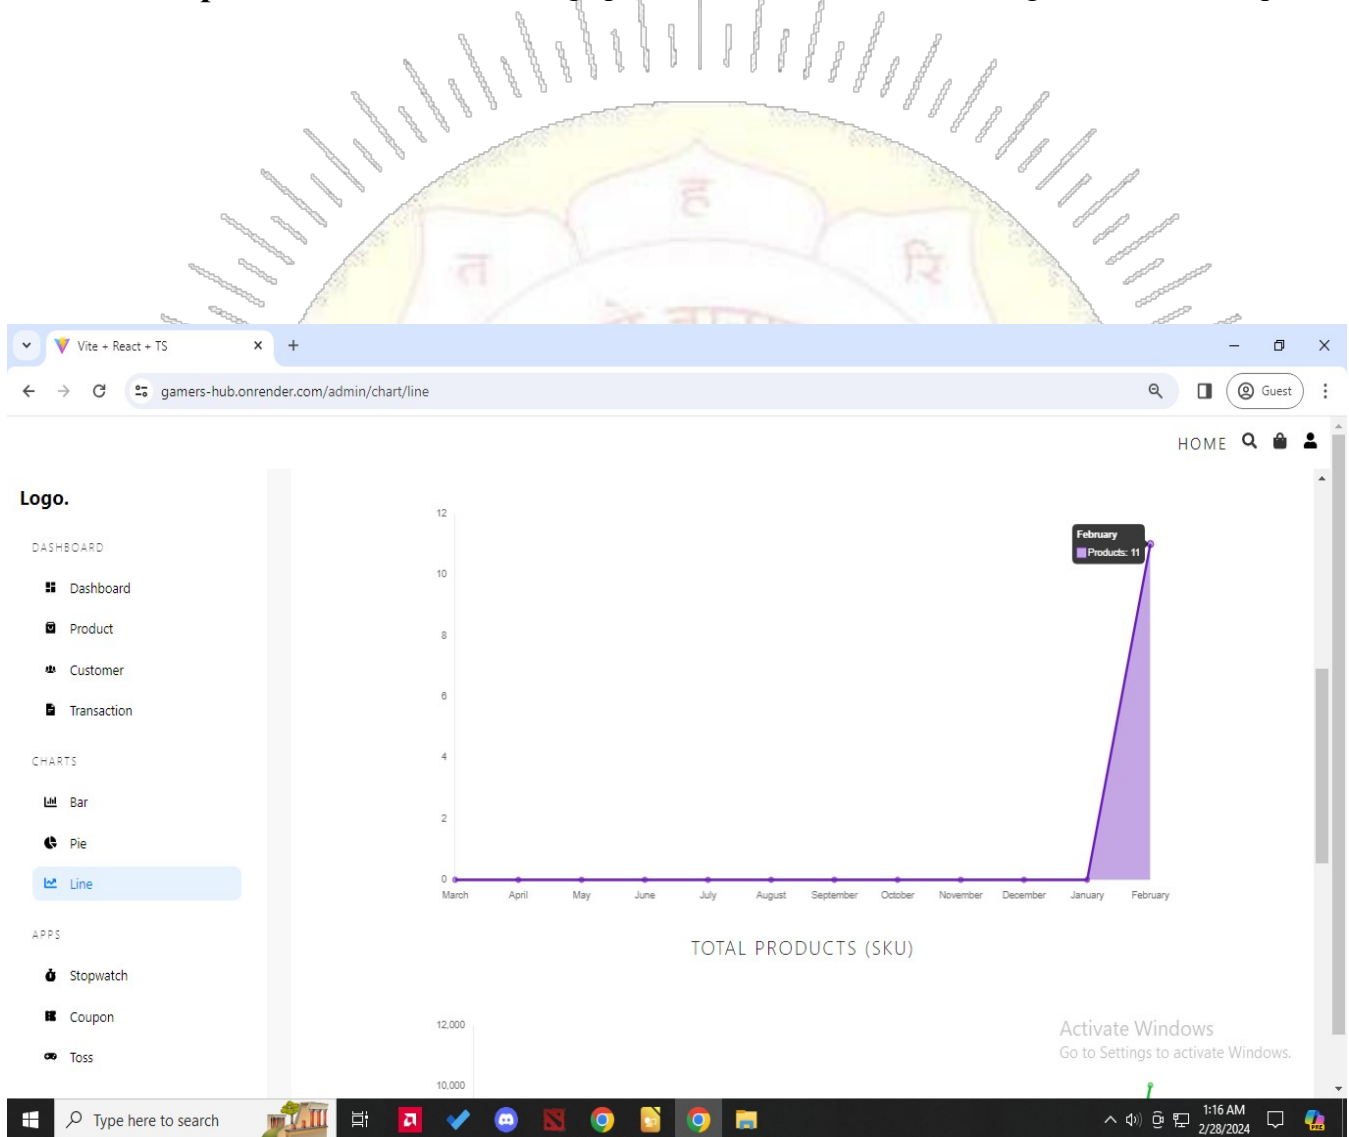

Description: - The Active User Chart Page provides administrators with insights into the engagement and

E-Commerce Website

Page Name: - Admin Product SKU chart

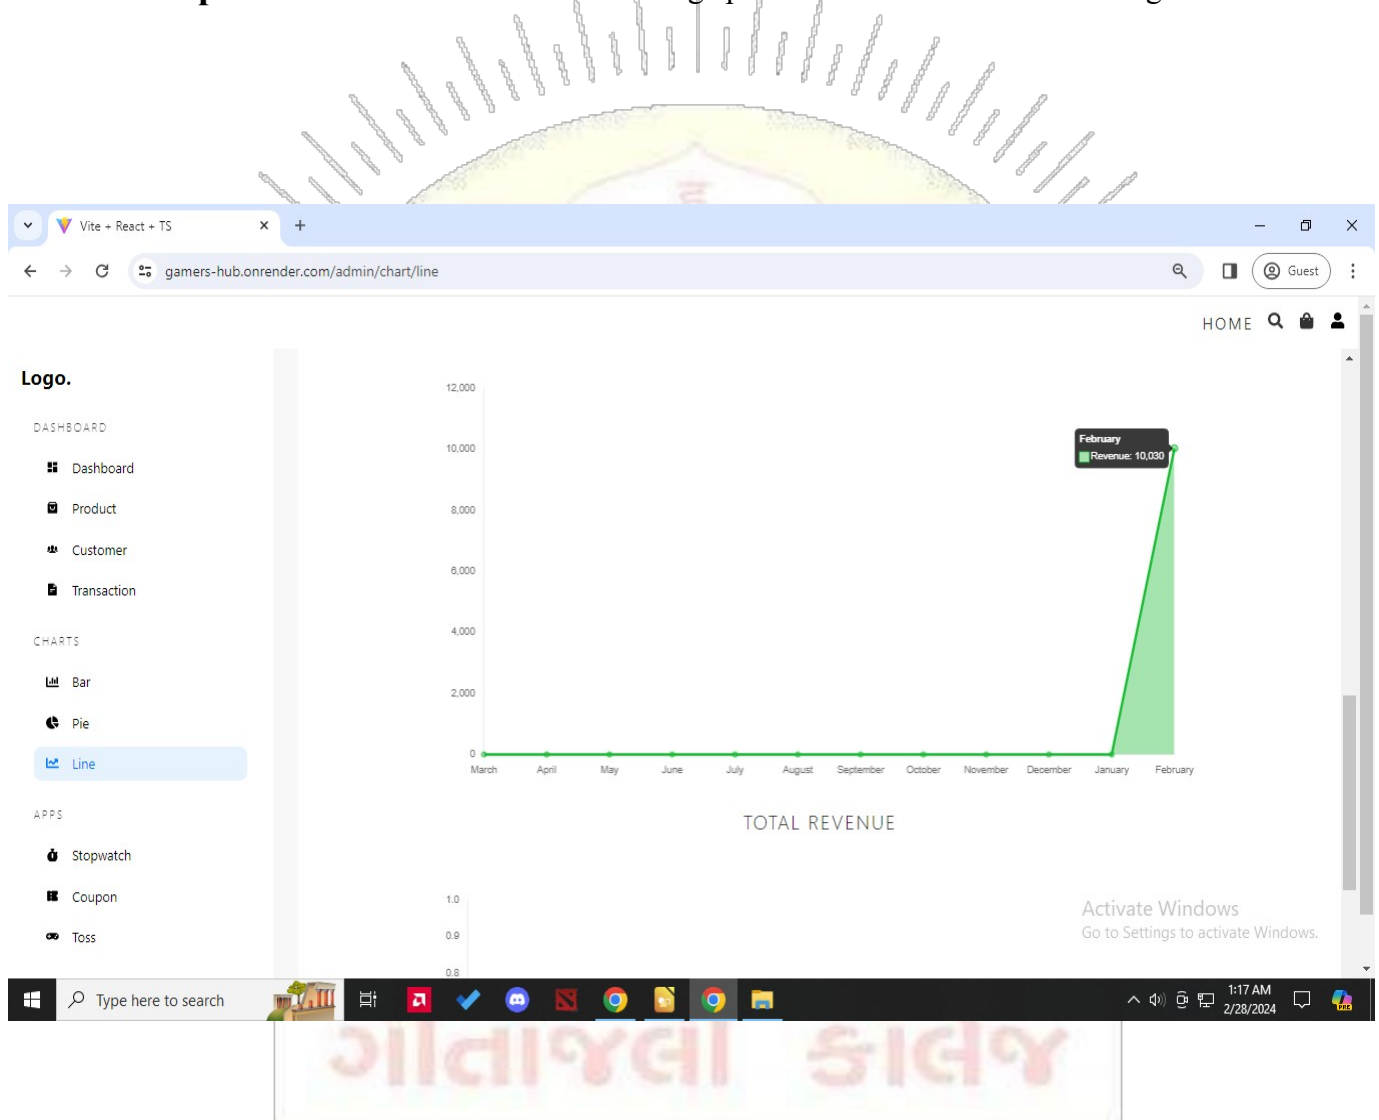

Description: - The SKU Chart Page provides administrators with insights into the sales performance and p

E-Commerce Website

Page Name: - Admin Total Revenue Chart

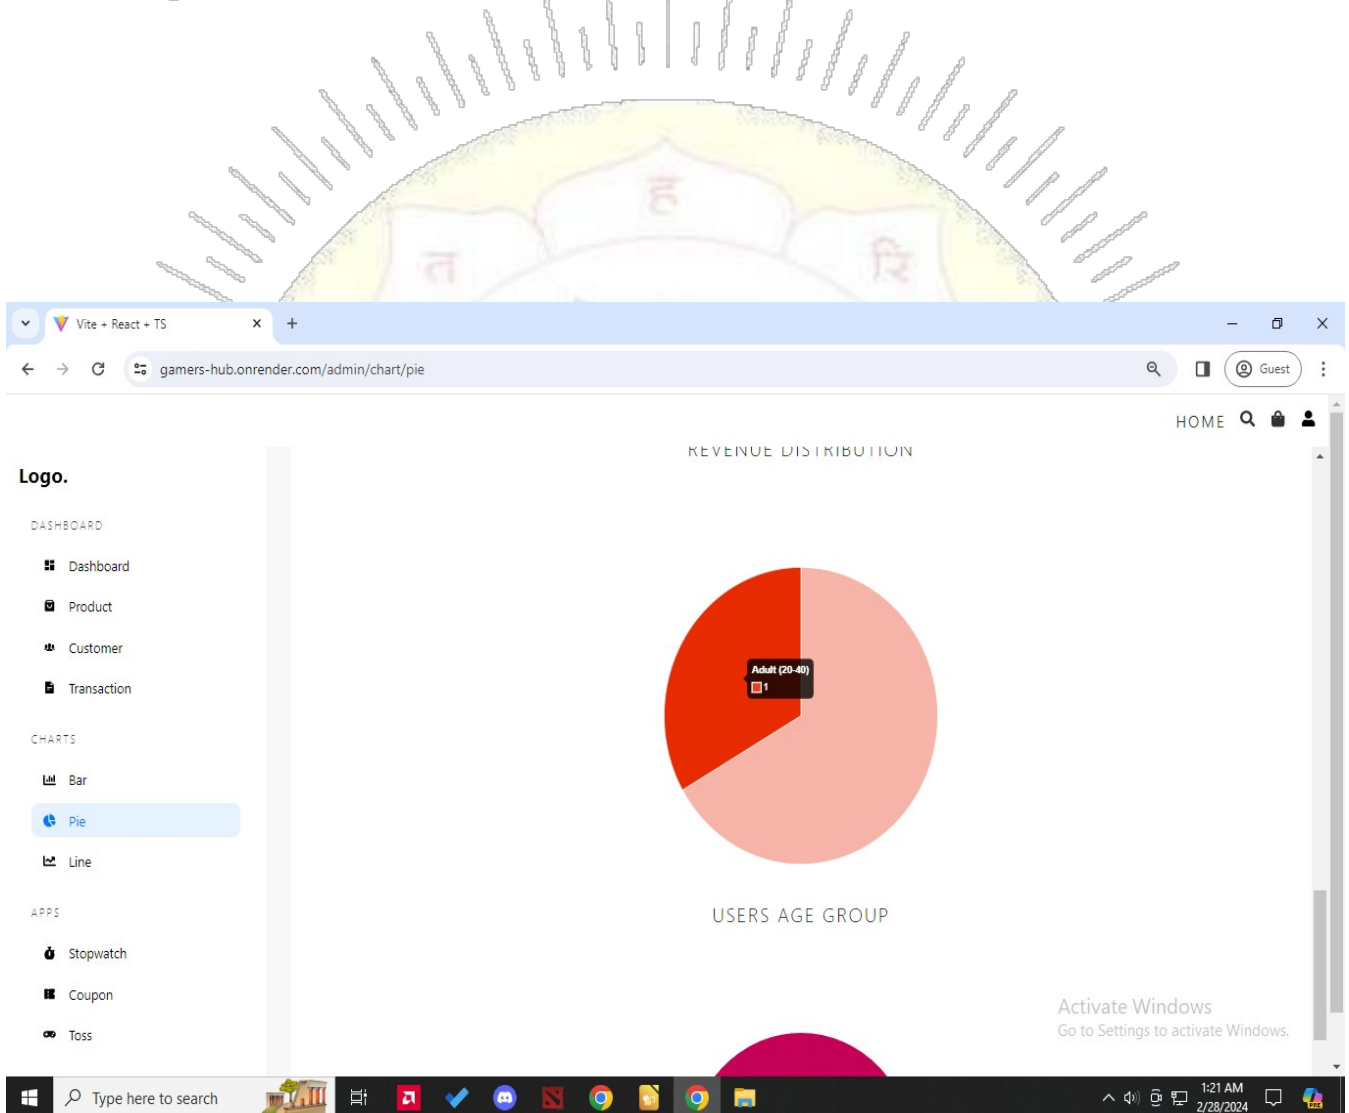

Description: - The Total Revenue Chart Page provides administrators with insights into the overall revenue

E-Commerce Website

Page Name: - Admin User Group Age Chart

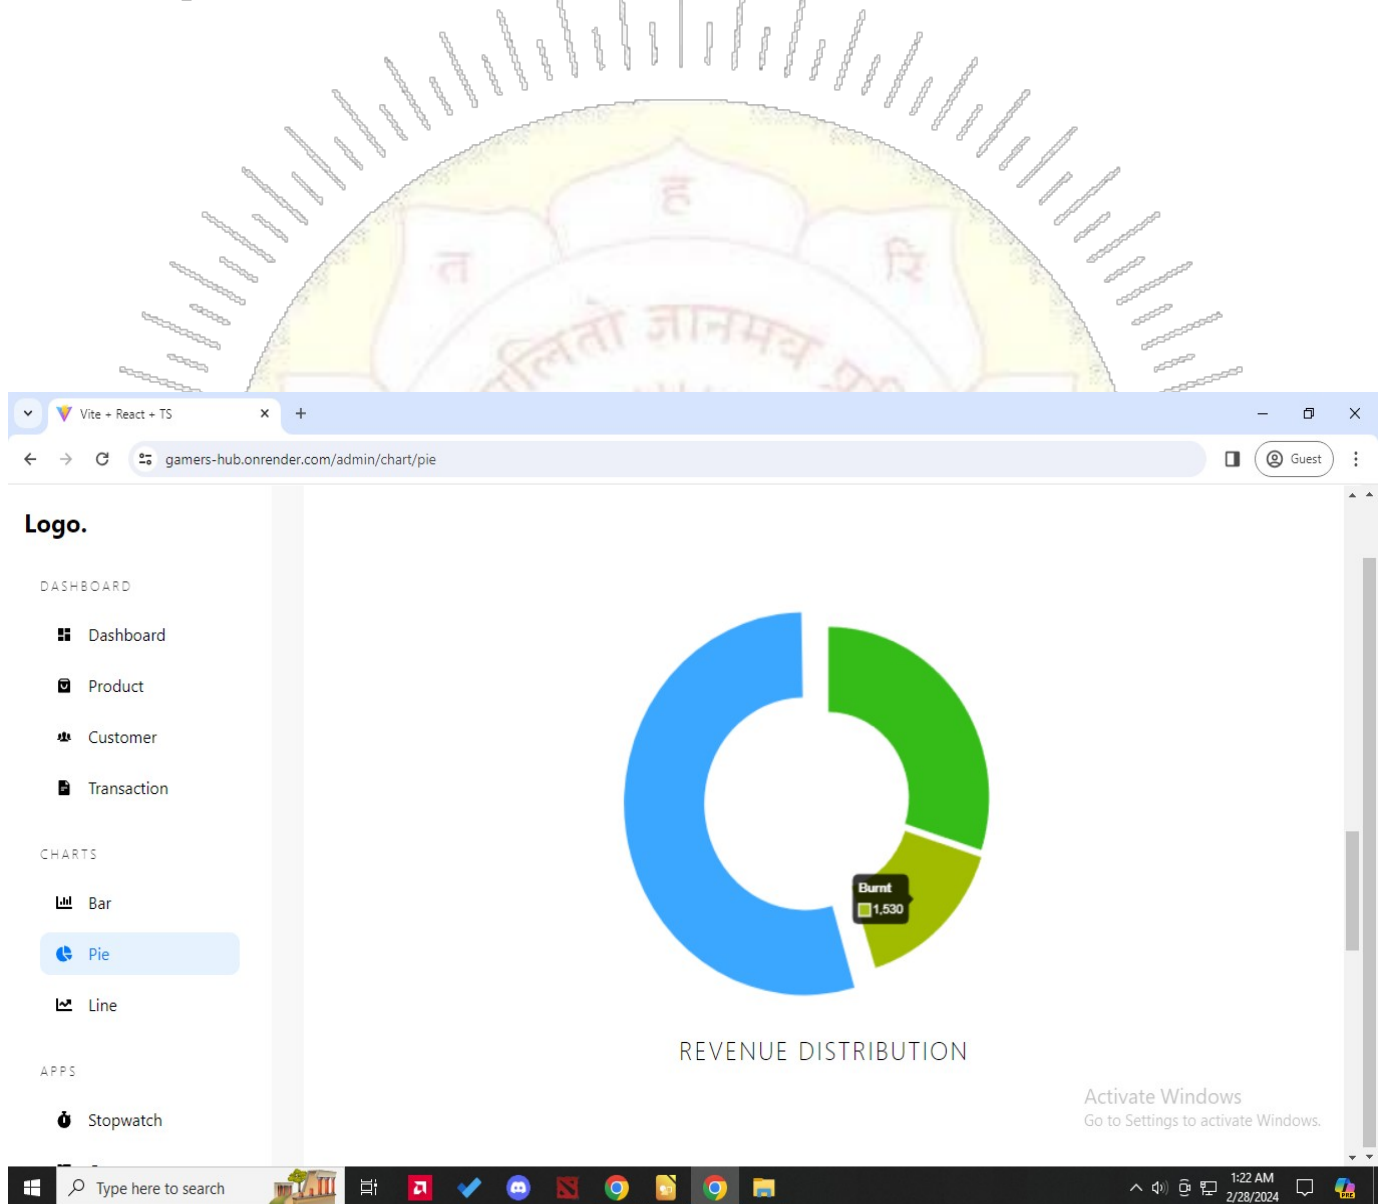

Description: - The User Age Group Chart Page provides administrators with insights into the demographic

E-Commerce Website

Page Name: - Admin Revenue Distribution Chart

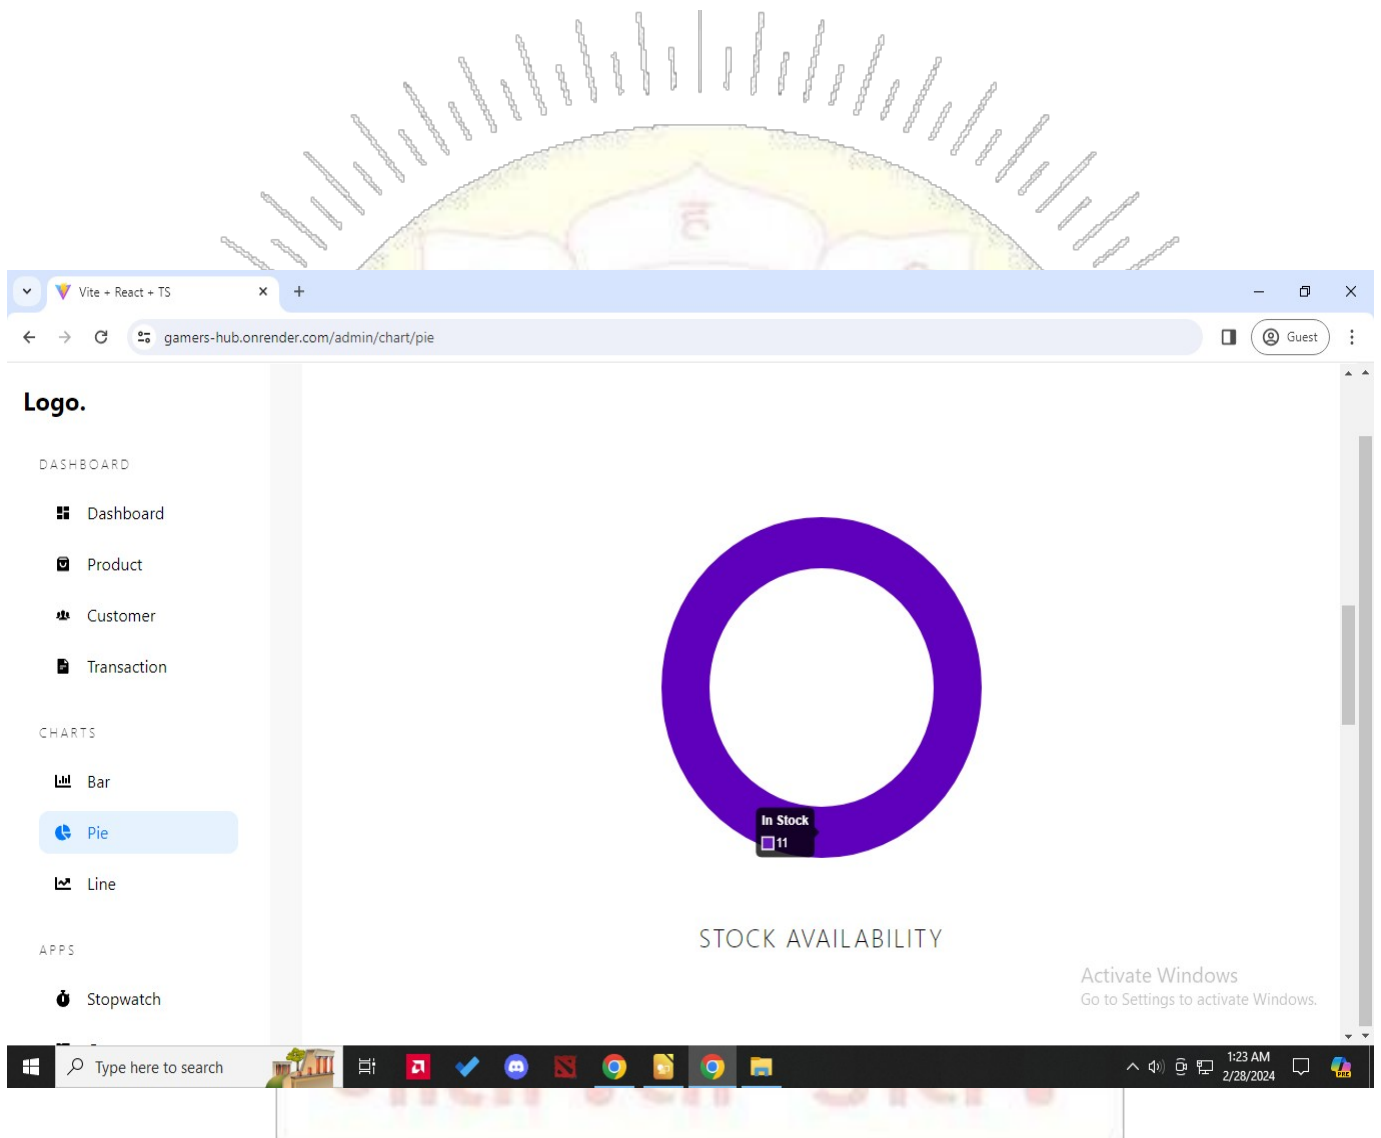

Description: - The Revenue Distribution Chart Page provides administrators with insights into the distribution of revenue across different categories.

E-Commerce Website

Page Name: - Admin Stock Available Chart

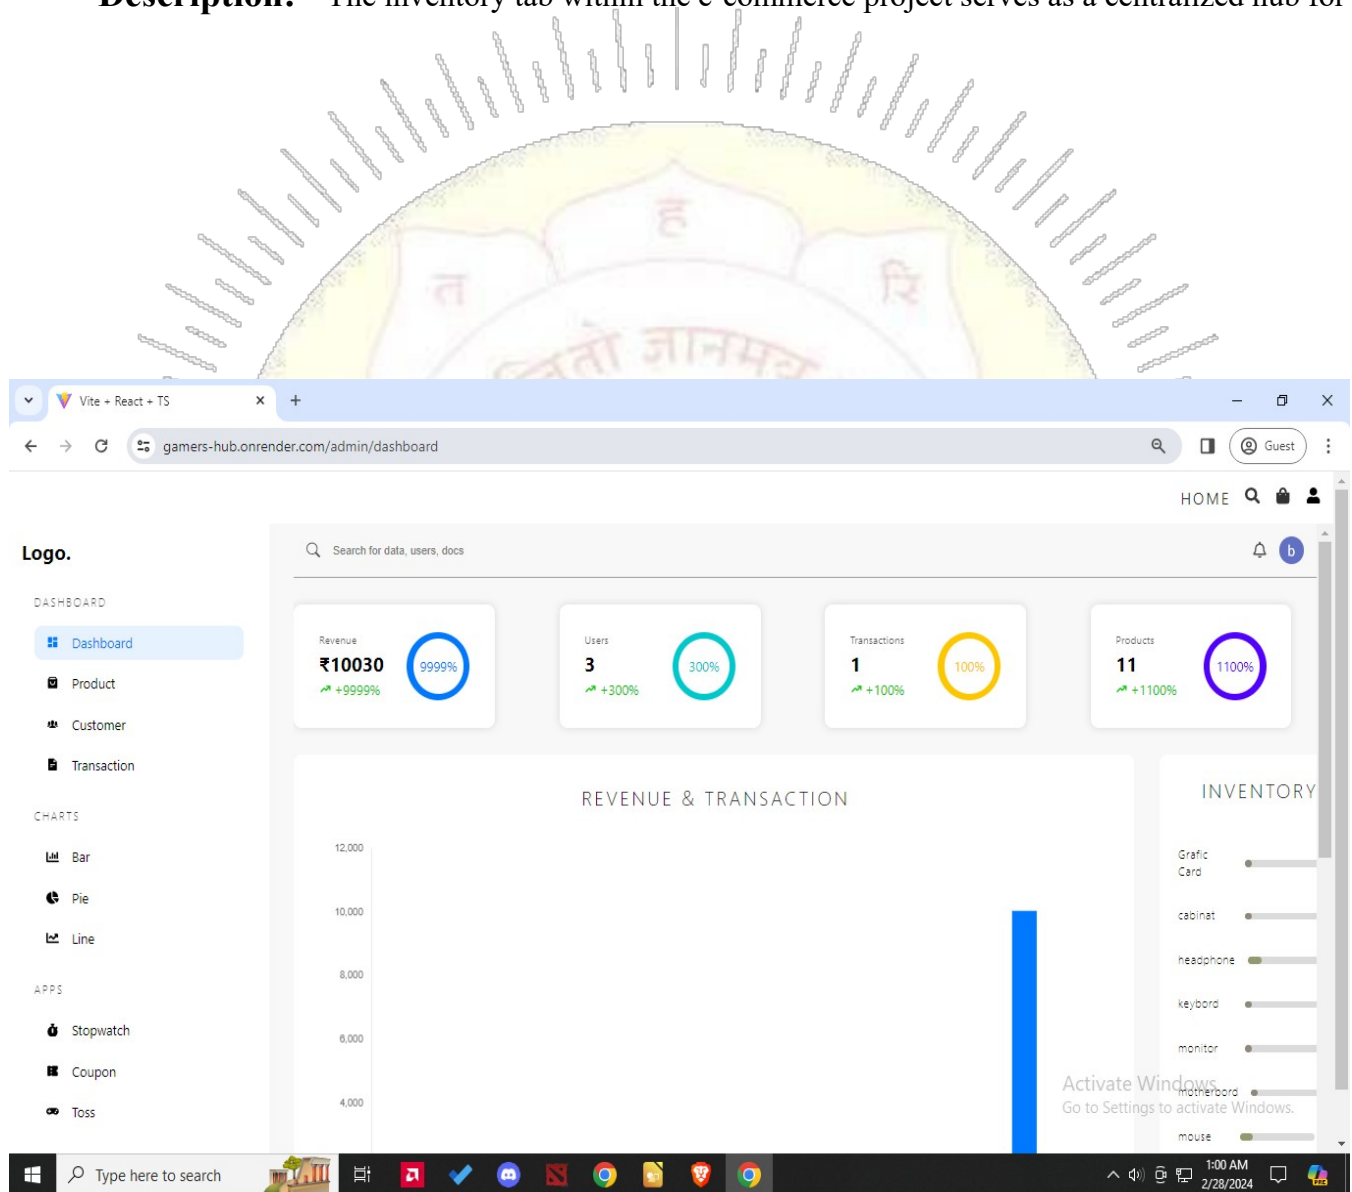

Description: - The Stock Available Chart Page provides administrators with insights into the distribution of stock availability across different categories.

E-Commerce Website

Page Name: - Admin Inventory stock tab

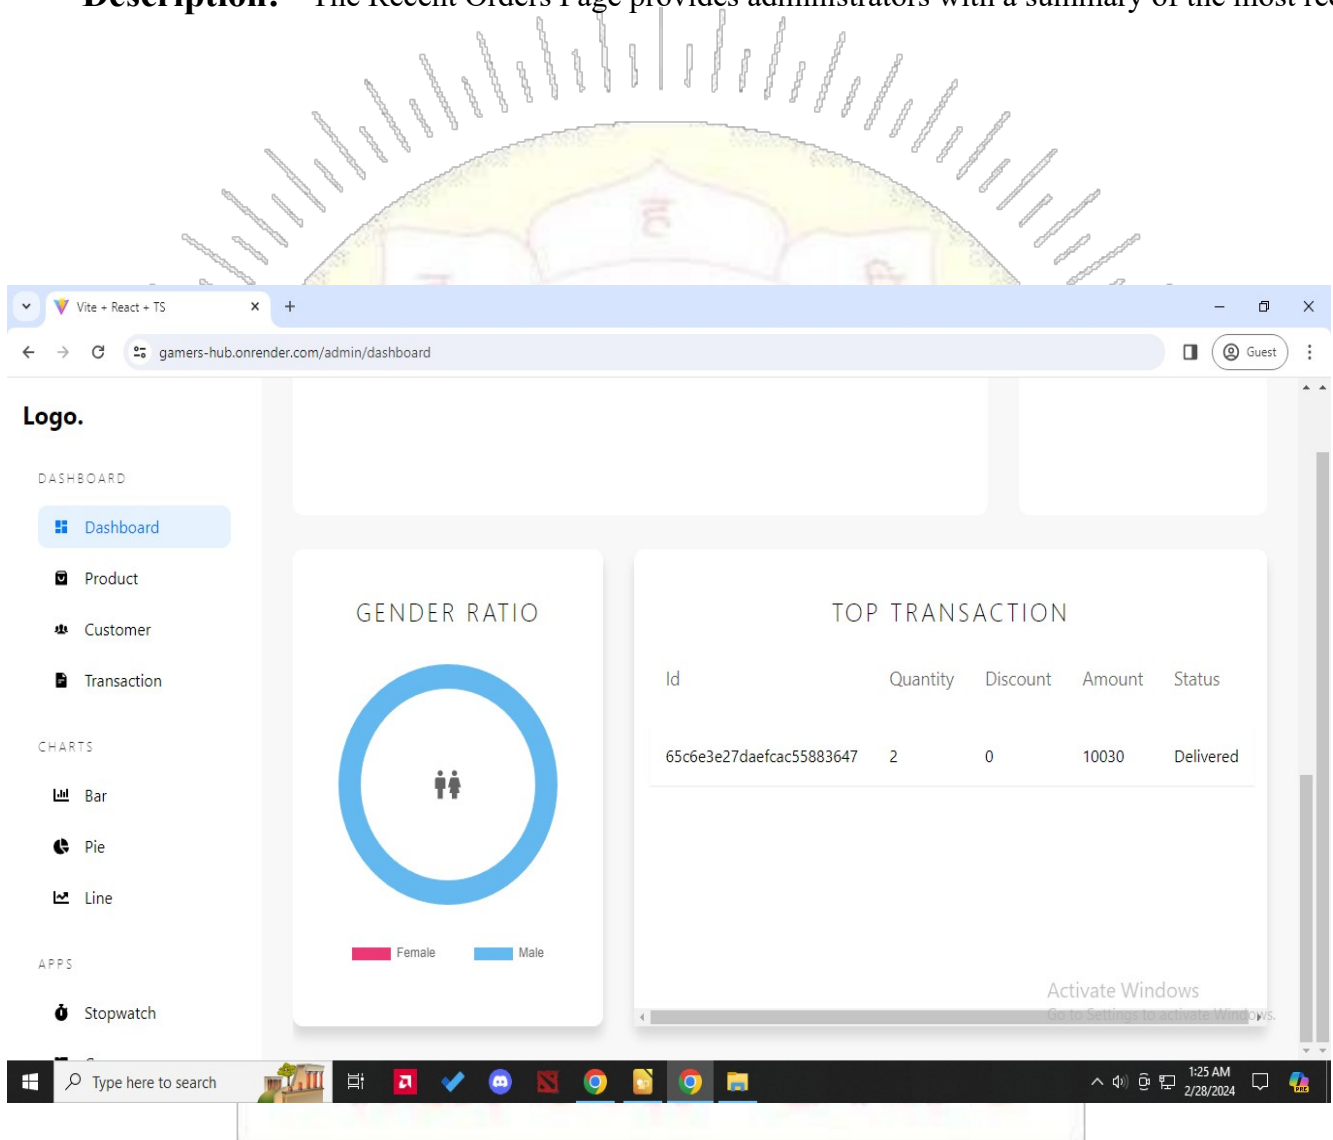

Description: - The inventory tab within the e-commerce project serves as a centralized hub for managing products, including viewing stock levels, adding new items, and updating existing ones.

E-Commerce Website

Page Name: - Admin Recent Order Page

Description: - The Recent Orders Page provides administrators with a summary of the most recent orders.

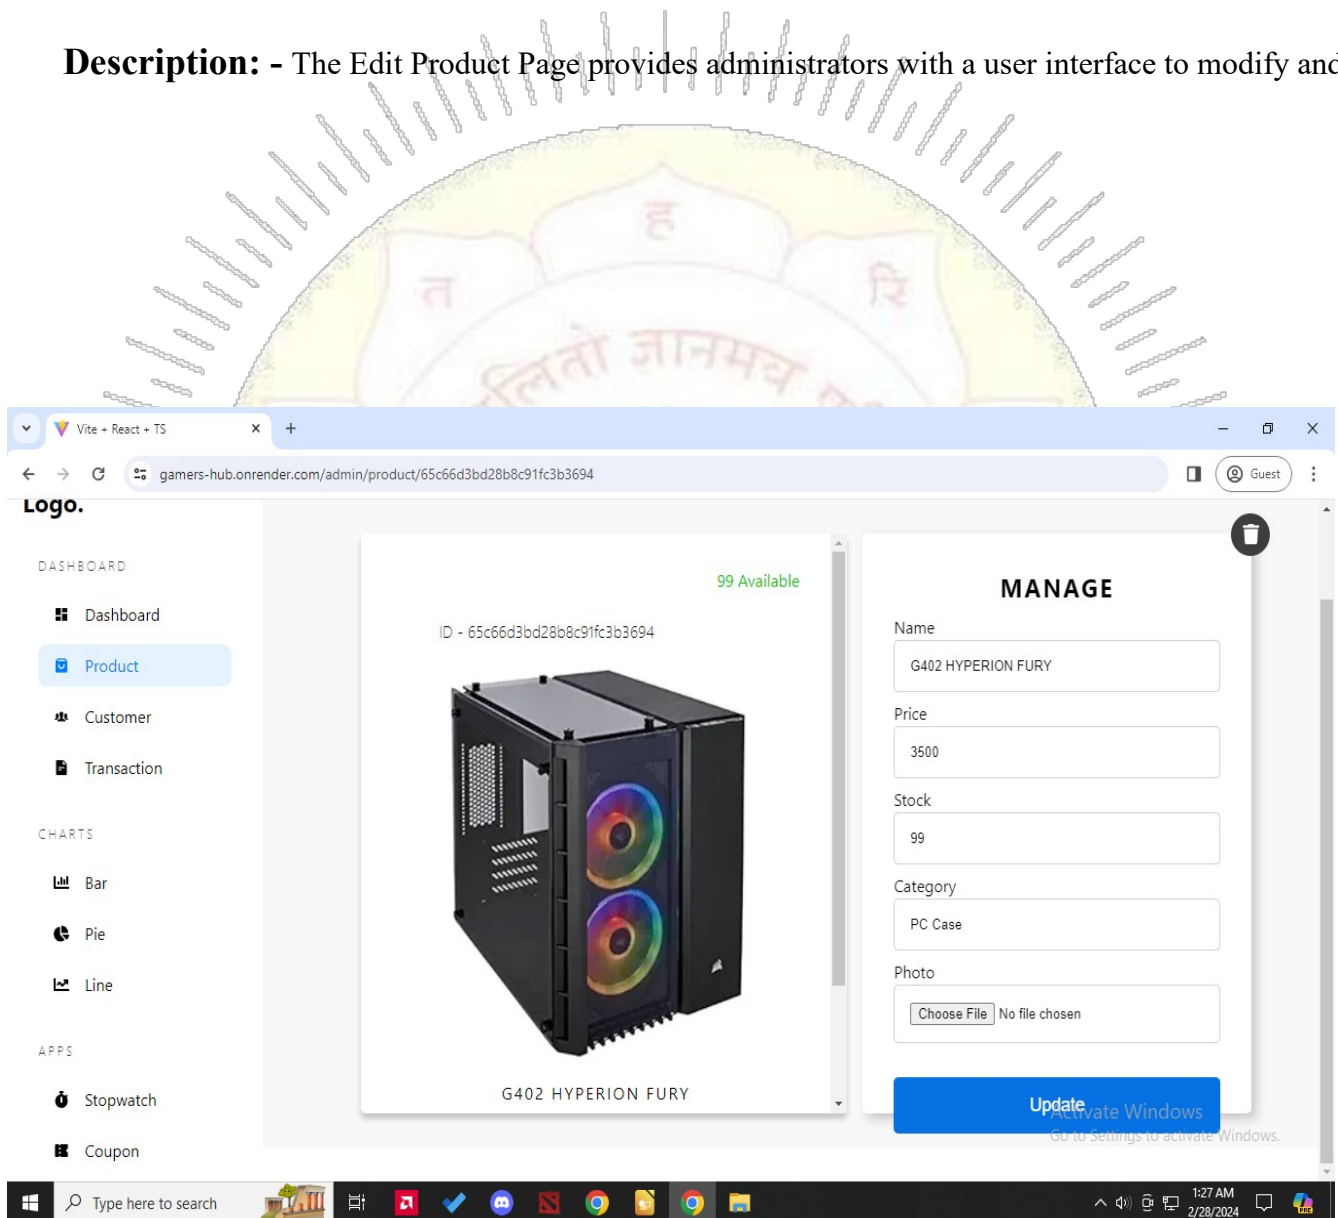

E-Commerce Website

ADMIN

Page Name: - Product Edit Page

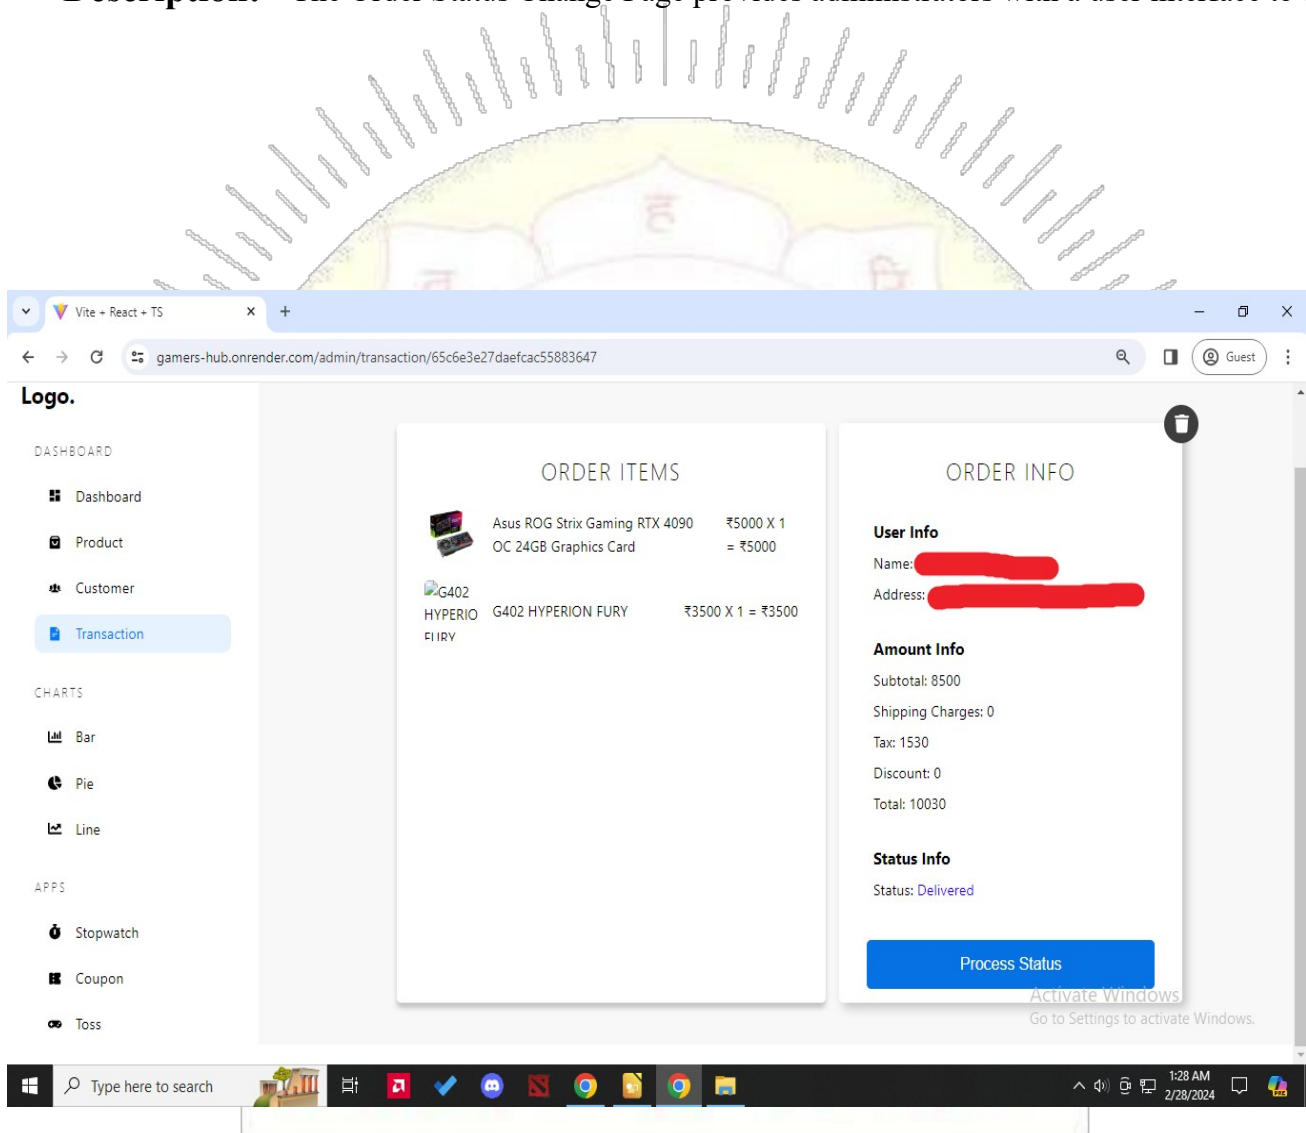

Description: - The Edit Product Page provides administrators with a user interface to modify and update the

E-Commerce Website

Page Name: - Admin Order Status Chage

Description: - The Order Status Change Page provides administrators with a user interface to update the status of an order.

E-Commerce Website

FUTURE REQUIREMENTS OF PROJECT

1. Mobile Commerce (mCommerce) Optimization:

- Responsive design for mobile devices.
- Mobile-friendly checkout processes.
- Integration with mobile payment solutions.

2. Voice Commerce Integration:

- Voice search optimization.
- Voice-enabled product browsing.
- Voice-activated shopping assistance.

3. Artificial Intelligence (AI) and Machine Learning (ML):

- Personalized product recommendations.
- Predictive analytics for inventory management.
- Chatbots for customer support.
- Fraud detection.

4. Augmented Reality (AR) and Virtual Reality (VR):

- Product visualization in real-world environments.
- Immersive shopping experience.
- Reduced returns through accurate product representations.

5. Social Commerce Integration:

- Direct selling through social media platforms.
- Social sharing of products.
- User-generated content for marketing.

6. Subscription-Based Services:

- Subscription boxes.
- Automatic product replenishment.
- Access to premium content or services.

7. Blockchain Technology for Security and Transparency:

- Secure payment solutions.
- Supply chain tracking.
- Product authentication.

E-Commerce Website

LIMITATION OF PROJECT

Limitations of an e-commerce project may arise from various factors, including technological constraints.

1. **Digital Divide**: Not all potential customers may have access to the internet or digital devices, limiting the reach of the e-commerce platform.
2. **Security Concerns**: E-commerce platforms are susceptible to security threats such as data breaches, fraud, and phishing attacks, which can erode customer trust.
3. **Technical Issues**: Technical glitches, website downtime, and performance issues can disrupt the user experience and lead to lost sales.
4. **Logistics and Shipping Challenges**: Timely delivery, shipping costs, and logistics management are critical factors in the success of an e-commerce business.
5. **Payment Gateway Issues**: Payment processing errors, transaction failures, and issues with payment gateways can hinder the checkout process.
6. **Product Perception**: Customers may be hesitant to purchase certain products online, especially those that require physical inspection or have a high perceived risk.
7. **Return and Refund Policies**: Complicated or unfriendly return and refund policies may deter customers from making purchases.
8. **Competition and Market Saturation**: The e-commerce landscape is highly competitive, with numerous established players and new entrants, leading to market saturation.
